

RCR-600 Hybrid Recorder Dotting Type Recorder

Manual RCR-600 Recorder Revision 12/20 • D1208 TEMPCO ELECTRIC HEATER CORPORATION 607 N. Central Avenue, Wood Dale, IL 60191-1452 USA www.tempco.com • info@tempco.com P: 630.350.2252 • F: 630.350.0232

For safety using

Thank you for purchasing our CR06 Hybrid Recorder.

In order to this instrument to exhibit all of its functions effectively and correctly, read and understand this instruction manual thoroughly before using the instrument.

Don't use this product in any method not specification by manufacturer. The protective features of this product may be impaired if it is used in a method not specified in the operation manual.

The symbols below are used on this instrument for the cautioning information.

Symbols use	d on the instrument
	This shows "Caution for handling". This symbol is used on the parts need to reference the instruction manual for saving human body and the instrument.
	This shows "Protective grounding". Be sure to provide protective grounding prior to operate this instrument.
A	This shows "Risk of electric shock". This symbol is used on the parts, which has a risk of electric shock.

	e following warnings/cautions an r to secure safety in handling the	-						
General	(1) In order to prevent electric shock; be sure to power source when wiring it.(2) When the effect on the system is expected be							
	or failure the instruments, take precaution system.(3) Take precautions to so that an alien substance.	ns to ensure the overall safety of your						
Protective Grounding	 (1) In order to prevent an electric shock; be sure to provide protective grounding prior to turning on this instrument. (2) Do not cut a protective grounding conductor or disconnect protective grounding. 							
Power Source	 Make sure that the supply voltage for this in supply source. 	nstrument conforms to the voltage of the						
	Rated power voltage range	:100-240VAC						
	Working supply voltage range	:85-264VAC						
	Rated power frequency	: 50/60Hz						
	Power consumption (2) Attach a protective cover prior to turning on (3) Power module that is used in the instrumen							
Working Environment	 (1)Do not operate this instrument in the ecombustible/explosive/corrosive gas or wa (2) Please use in an environment that is shown 	iter/steam.						
	Installation features	: Indoor						
	Altitude	:2000m or less						
	Ambient temperature	:0-50°C						
	Ambient humidity	:20-80%RH(Non condensing)						
	Overvoltage category	:Category I						
	Allowable pollution degree	: Pollution degree 2						
	Vibration	:10~60Hz 0.2m/s ²						
	Impact	: The impact is not allowed.						
Input and Output Wiring	Provide input and output wiring after turning	ng off the power.						

Input and Output Wiring	Do not use empty terminals for other purposes such as relaying, etc.
Inside of Instrument	Do not touch the switches, etc. inside this instrument. Also, do not replace the main unit or PRINTed circuit boards. When this is neglected, we cannot guarantee functioning of the instrument. Contact our dealer where you purchased the instrument, or our sales representative.
Transportation	When transporting this instrument or the equipment with this instrument incorporated in it, take measures to prevent opening the door and falling out the inner module.
	[Note]
Instruction Manual	(1) Deliver this instruction manual to an end user.
	(2) Prior to handling this instrument, be sure to read this manual.
	(3) If you have any questions on this manual or find any errors or omissions in this manual, contact our sales representative.
	(4) After reading this manual, keep it carefully by the instrument.
	(5) When the manual is lost or stained, contact our sales representative.
	(6) It is prohibited to copy or reproduce this manual without our permission.
Installation	(1) When installing this instrument, put on a protective gear such as safety shoes, helmet, etc. for your safety.
	(2) Do not put your foot on the installed instrument or get on it, because it is dangerous.
Maintenance	Only our serviceman or persons authorized by Tempco are allowed to remove and take the inner module, the main unit and PRINTed circuit boards apart.
Disposal	(1) Dispose the replaced batteries in a correct way.
	(2) Do not incinerate plastics of maintenance parts and replacement parts. A harmful gas may be produced.
Cleaning	(1) Use dry cloth to clean the surface of this instrument.
	(2) Do not use any organic solvent.
	(3) Cleaning the instrument after turning off the power.
Revisions	This instruction manual is subject to change without prior notice.

1.Using procedure

This instruction manual consists of "For safety using", "Contents" and "Chapter 1 to Chapter 11" as bellow. Read the applying sections for your purpose to use this instrument.

1. INTRODUCTION

1.1 Checking the Accessories

Upon delivery of this instrument, unpack and check its accessories and appearance.

If there are any missing accessories or damages on the appearance, contact our dealer where you purchased the instrument, or our sales representative.

Following accessories should be attached.

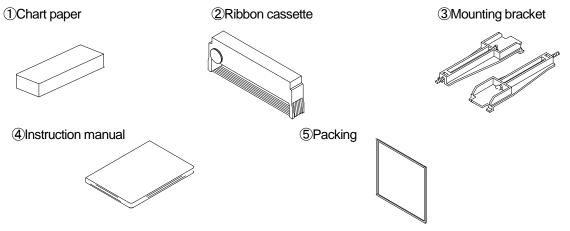

Fig. 1.1 Accessories

Table 1.1 List of Accessories

No.	Part Name	Туре	Quantity	Remarks
1	Chart paper	RCA40901	1	50 equal divisions
2	Ribbon Cassette	RCA40902	1	
3	Mounting bracket		2	Panel mounting bracket
4	Instruction manual		1	This manual
5	Packing		1	For IP65

[Note]

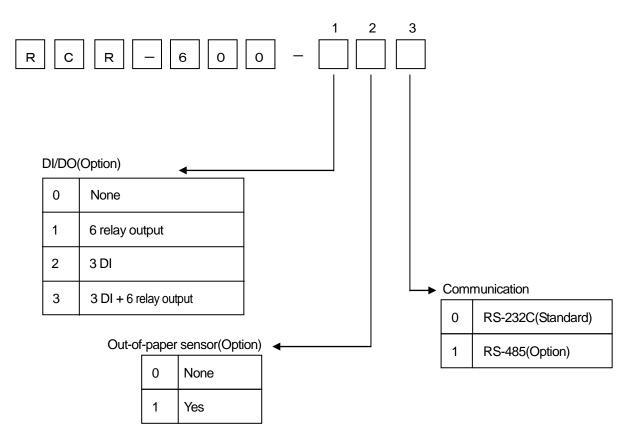

The ribbon cassette has been set in the instrument upon shipment.

1.2 Checking the Type and Specifications

A nameplate is affixed to the inside of the instrument. Remove the chart holder and make sure that the nameplate is affixed to the middle far side of the instrument.

Make sure that this instrument meets your requested specification, seeing the following tables.

Table 1.2 Type

1.3 Temporary Storage

Store the instrument in the following environment.

When incorporated in the equipment, store it in the following environment as well.

Storage in a poor environment may damage the appearance, functions, and service life of the instrument.

Storage Environment

·A place with little dust.

• A place free from combustible, explosive, or corrosive gases (SO_2 , H_2S , etc.).

• A place free from vibrations or shocks.

• A place frees from water or steam or high humidity (95% RH max.).

• A place free from direct sunshine or high temperature (50°C max.).

• A place free from an extremely low temperature (-20°C min.).

1.4 Indication Card

An indication card has been affixed to the door upon delivery. Enter a name as required.

Note that if a non-original nameplate is attached, it may damage the door or mounting part.

2. CONSTRUCTION

2.1 Appearance

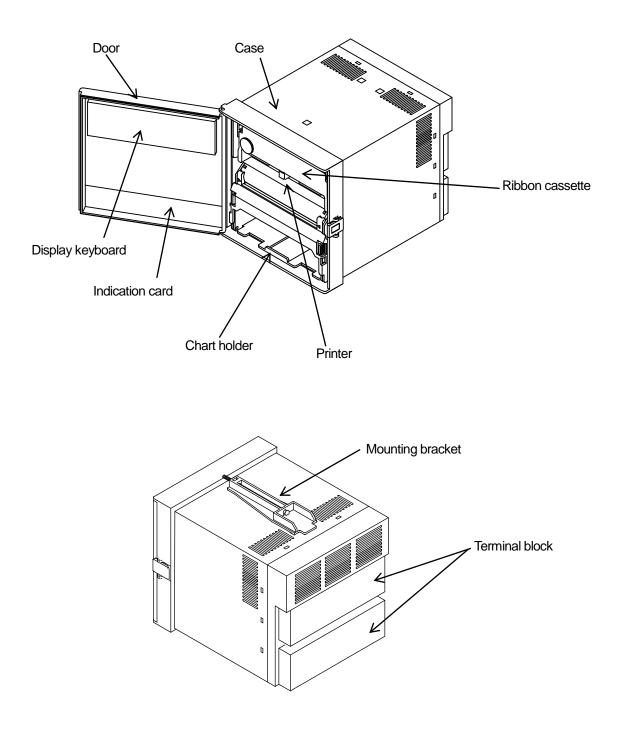

Fig. 2.1 Appearance

2.2 Display Screen and Operation Keys

2.2.1 Display Screen

The following describes the display screen. Since the channel numbers and data are indicated by a 7-segment LED, alphabets are symbolized to represent them.

For the LED display, see " Symbolized Alphabets for Display" at [Reference] below.

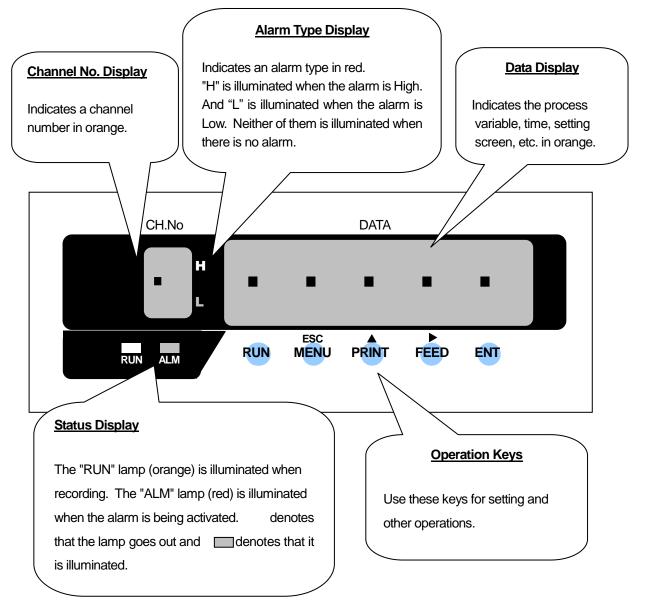

Fig. 2.2 Display

[Reference] Symbolized Alphabets for Display														
Display	•	•	-	-	•	-	•	•	•	•	•	-	•	-
Alphabet	Α	В	С	D	E	F	G	Н	h	Ι	J	K	L	I
Display	•	•	•	•	•	•	•	•	•	•	•	•	•	•
Alphabet	М	Ν	0	Р	Q	R	S	Т	U	V	W	Х	Y	Z

2.2.2 Operation Keys

The following describes each operation key.

This manual represents the actual operation keys as shown in the figure below.

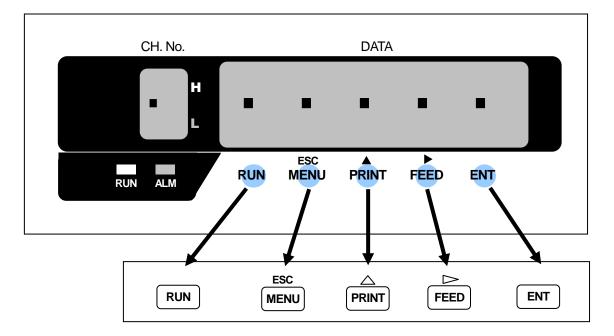

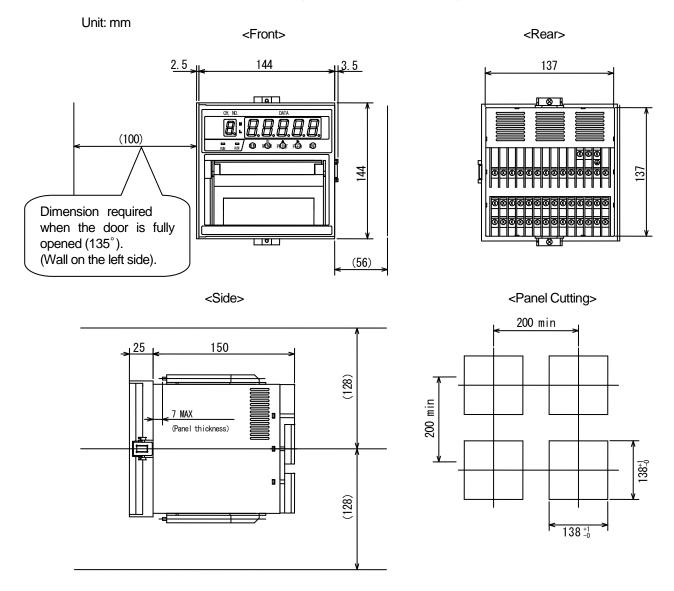

Fig. 2.3 Actual Display and Operation Keys

Table 2.1 Names of Operation Keys and Their Functions

Кеу	Name	Function				
RUN	"RUN" key	Starts/stops recording. To stop, hold down the "RUN" key for 3 seconds or more. (Gone out the "RUN" lamp.) To start, press the "RUN" key. (Illuminates the "RUN" lamp.)				
ESC	"MENU" key	MENU function	Selects engineering list print and change to the setting mode.			
	"ESC" key	ESC function	Exits that menu halfway selecting a function.			
	"PRINT" key	PRINT function	Used to perform manual print or list print.			
PRINT	"∆" key	Δ function	Used to select a setting parameter (numeral or built-in command)(ascending direction).			
FEED	"FEED" key	FEED function	The chart paper is fed while the key is pressed, and stopped when released.			
	"∙ " key	 function 	Used to shift a digit in setting a numeral.			
ENT	"ENT" key	Used for registering a setting parameter (numeral or built-in command) after selecting it, or executing a function. Pressing this key executes the setting.				

3. INSTALLATION

3.1 Outside Dimensions Drawing and Panel Cutting Dimensions

Fig. 3.1 Outside Dimensions and Panel Cutting Dimensions

For maintenance and safety of the instrument, it is recommended to secure the spacing larger than the parenthesized dimensions per unit.

3.2 Mounting to the Panel

Do not install the instrument in a place exposed to a combustible, explosive, or corrosive gas (SO₂, H_2S , etc.).

Install the instrument in the following places

- A place free from where humidity often changes.
- A place of normal temperature (25°C or so).
- A place exposed to as little mechanical vibrations as possible.
- A place with as little dusts as possible.
- A place affected by the electromagnetic field as little as possible.
- A place not directly exposed to high radiant heat.
- A place where the altitude is up to 2000m.
- Humidity has an effect on the chart paper and ink. Use the instrument in a humidity range of 20 to 80%RH (60%RH is optimum).
- This instrument needs the inside installation.

Mounting to the Panel

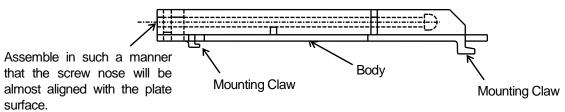

- A steel plate not thinner than 1.2mm is recommended as a mounting panel.
- The maximum thickness of the mounting panel is 7mm.

Inclination

- · Install the instrument horizontally.
- The instrument should be installed so that its inclination should be 0° at the front and within 30° at the rear.

3.2.1 Procedure for Mounting to the Panel

- 1) Assemble the mounting bracket refer to Fig.3.2.
- 2) Fit in this instrument through the front of the panel.
- 3) Fit the claws of the mounting bracket into the square holes in the top and bottom surfaces of the case.
- 4) Tighten the screw of the mounting bracket with a screwdriver to attach it to the panel. When the mounting unit does not move back and forth any more, tighten a screw by 180°.

[Note]

If it is tightened with an excessive force, the case may be distorted and the mounting bracket may be deformed. An adequate tightening torque is about 0.2 to $0.3 \text{ N} \cdot \text{m}$ (2~3 kgf·cm).

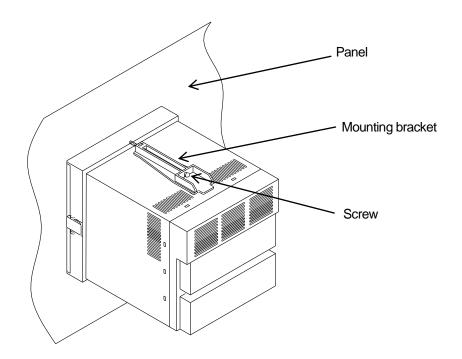

Fig. 3.3 Mounting to the Panel

3.2.2 Mounting to the Panel in compliance with the IP65

Prior to mounting the instrument to the panel, attach a packing to the position shown in the figure. The rest of the procedure is the same.

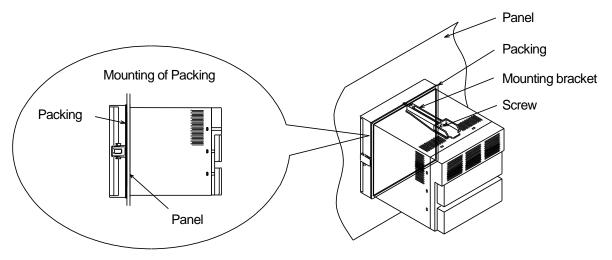

Fig. 3.4 Mounting to the Panel (in compliance with the IP65)

4.1 Terminal Layout and Power Wiring

4.1.1 Terminal Layout

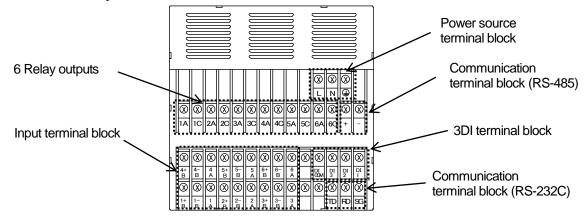

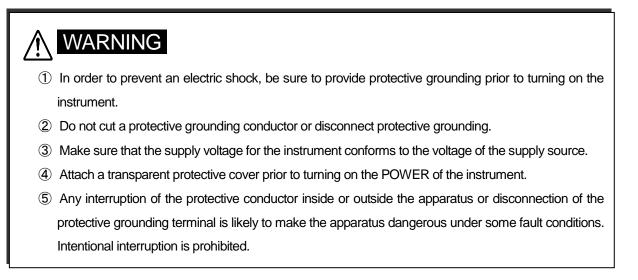

Fig. 4.1 Terminal Layout (Rear view)

4.1.2 Power Wiring

	UTION
① As an ele	ctric wire for the power source, use a 600 V vinyl insulated wire (IEC60227-3) or its
equivalen	t or above.
 Attach a r 	ound press-fitting terminal with insulated sleeve (for M3.5) to the end of the electric wire.
③ Connect a	a protective grounding (resistance:100 Ω or lower, a minimum diameter of a grounding
conductor	r:1.6mm) to the protective grounding terminal.
(4) If other ins	strument shares the protective grounding conductor, there may be an effect caused by
noise con	ning from the grounding conductor. It is recommended not to share it with other instrument.
5 In order to	comply with the requirements of safety standard EN61010-1, the recorder shall have one
of the follo	owing as a disconnecting device, fitted within easy reach of the operator, and labeled as the
disconneo	cting device.
a. A sw	vitch or circuit breaker which complies with the requirements of IEC60947-1, IEC60947-3.
b. Ase	parable coupler which can be disconnected without the use of a tool.
c. Ase	parable plug, without a locking device, to mate with a socket outlet in the building.
⑥ This prod	uct has designed to conform to EN61010-1 installation Category II and pollution
degree 2.	
⑦ Please us	e the main power supply by the change within 10% of the rated voltage.
8 Transition	al current might flow to the main power supply when the power supply is turned on.

4.1.3 Wiring Procedure

CAUTION

The transparent protective cover should surely remove the left and right (both sides) hooks simultaneously. If it removes by turns, there is a possibility that it may damage.

- 1) Put your fingers on the left and right (both sides) hooks of the transparent protective cover on the power source terminal block. Pushing them inside, take out the cover to this side.
- 2) Connect the power source electric wire refer to Fig. 4.2. Connect the protective grounding to the (=) terminal. Connect the non-grounding side of the power source to "L" terminal. Connect the grounding side to the "N" terminal.
- 3) Put back the transparent protective cover.
- 4) Make sure that protective grounding is properly provided.

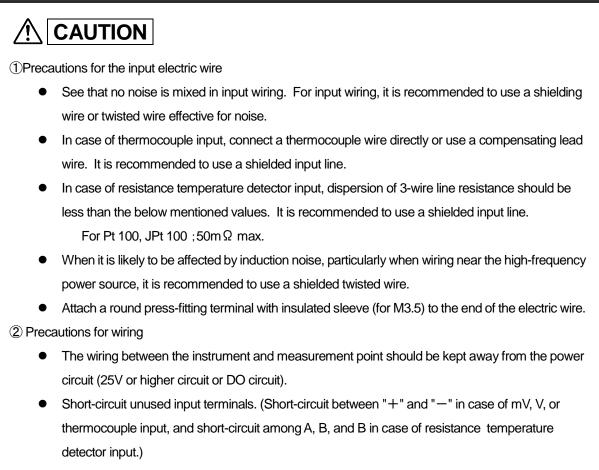

Power supply voltage Rated power voltage range

Rated power frequency

:100-240VAC Working supply voltage range :85-264VAC :50/60Hz

Fig. 4.2 Power source Terminal block

4.2 Input Wiring

• Ground the shield of connecting wire.

4.2.1 Wiring Procedure

The transparent protective cover should surely remove the left and right (both sides) hooks simultaneously. If it removes by turns, there is a possibility that it may damage.

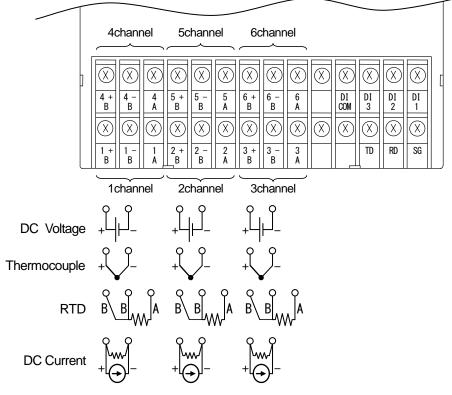

Fig. 4.3 Input Wiring

- 1) Put your fingers on the left and right (both sides) hooks of the transparent protective cover on the input terminal block. Pushing them inside, take out the cover to this side.
- 2) Wire the input lines refer to Fig. 4.3, Fig. 4.4(Page 18) and Fig. 4.5.(Page 19)
- 3) Put back the transparent protective cover.

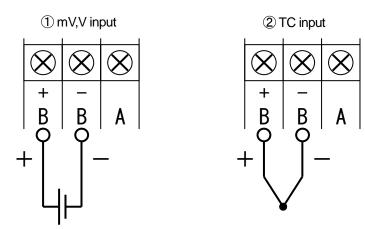

Fig. 4.4 Input Wiring (mV, V, TC)

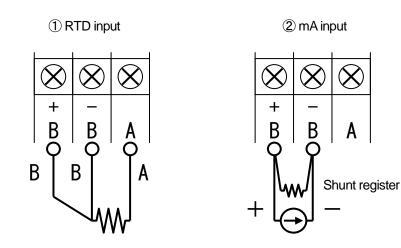

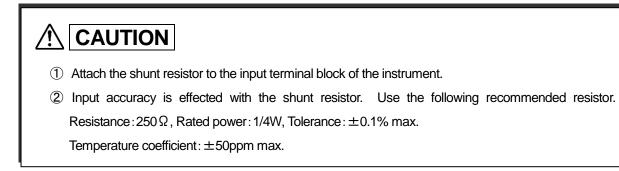

Fig. 4.5 Input Wiring (RTD,mA)

- ① Be sure to wire after turning off the POWER.
- 2 When the power source has been connected to the Alarm output, turn off that power source.
- ③ When a hazardous voltage supplies to alarm terminal:
- a) Never touch terminals preventing from electric shock.
- b) Attach covers to terminals.
- c) Wires should be double shielded.
- d) Adopts round pressure terminal connectors with insulation cover for wire, preventing from lose connection.

Precautions for Wiring the DI

- ① DI input has the built-in drive power source. Do not apply a voltage to a DI input terminal from the outside.
- (2) A DI input contact capacity should be a withstand voltage of 50V DC, 16mA or more, ON resistance of 20Ω max.(Wiring resistance included).
- ③ Do not use unused terminals as relay terminals.

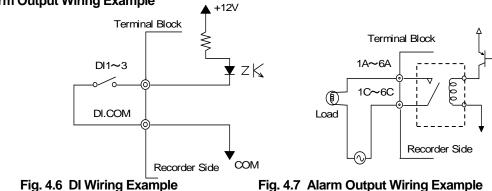

Precautions for Wiring the Alarm Output

- ① An alarm output contact capacity is as follows:
 - 250VAC : 3A at maximum (Resistive load)
 - 30VDC : 3A at maximum (Resistive load)
 - 125VDC : 0.5A at maximum (Resistive load)

0.1A at maximum L/R= 7ms at maximum (Inductive load)

- 2 Attach an anti-surge protective circuit (surge absorbers, etc.) to an output terminal, as required.
- ③ Attach a round press-fitting terminal with insulated sleeve (for M3.5) to the end of an electric wire.
- ④ Keep alarm output wiring away from input wiring.
- (5) Do not use unused terminals as relay terminals.

4.3.1 DI/Alarm Output Wiring Example

- ① The DI (Option) consists of a combination of 3 Digital inputs. The alarm output consists of 6-Relay output (Normally open).
- (2) Relay No.1 is a common output of paper empty sensor (Option) and alarm.

4.3.2 Alarm Output Wiring Procedure

Wire the Alarm output refer to Fig.4.8.

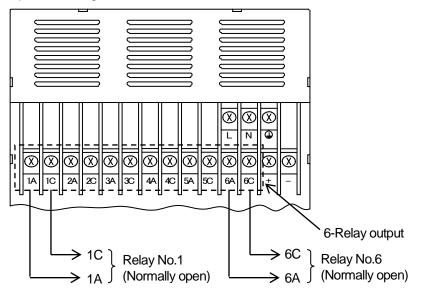

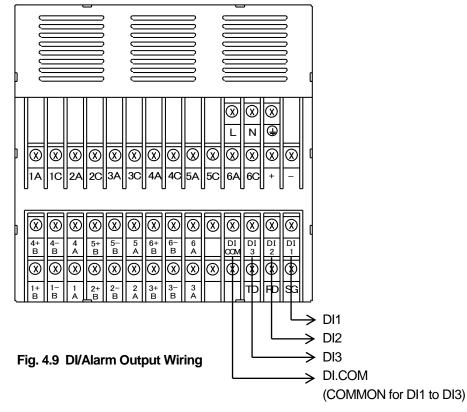

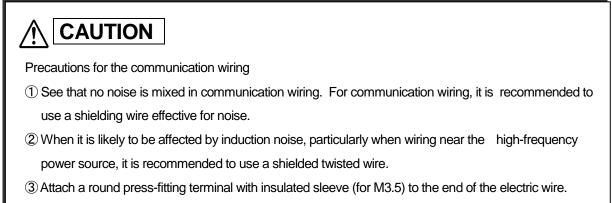

Fig. 4.8 Alarm Output Wiring

4.3.3 DI Wiring Procedure

Wire the DI refer to Fig.4.9.

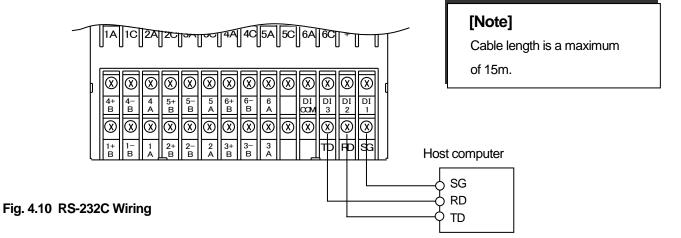

4.4 Communication Wiring

④ Ground the shield of a connecting wire.

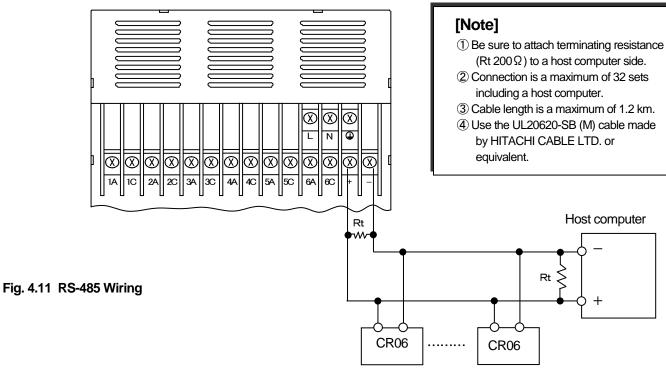

4.4.1 RS-232C Wiring

Wire RS-232C refer to Fig.4.10.

4.4.2 RS-485 Wiring

Wire RS-485 refer to Fig.4.11.

5. PREPARATIONS FOR OPERATION

5.1 Setting the Chart Paper

It is recommended to use our original chart paper to ensure proper recording. If the chart paper holder is taken out with recording operation being activated, the ink ribbon may be damaged. To replace the chart paper, be sure to press the "RUN" key to stop recording.

(1) Pressing the "RUN" key for 3 seconds or more

Stop recording operation. With the power turned on, press the "RUN" key for 3 seconds or more.

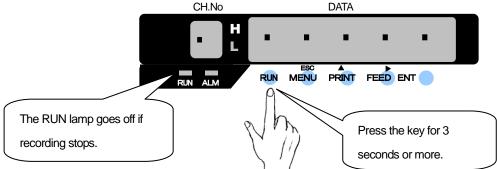

Fig. 5.1 Pressing the "RUN" key

(2) Opening the Door

Because you may be hurt when you put fingers at the time of the opening and closing of the door, please be careful.

Maximum angle of the door in opened-state is 135 degree. Do not further open the door otherwise hinge will be broken.

Push the door hook to unlock the door. Pull the door to this side to open it.

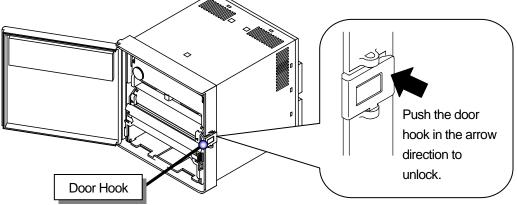

Fig. 5.2 Opening the Door

(3) Taking out the Chart Holder

Put your fingers onto the levers at both sides of the chart holder and pull it out to this side.

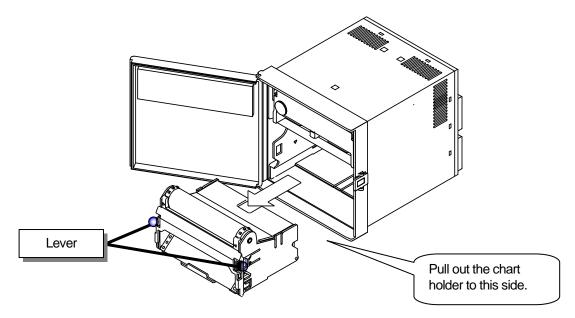

Fig. 5.3 Taking out the Chart Holder

(4) Opening the Chart Cover and Chart Guide

Open the chart guide and the chart cover outwardly.

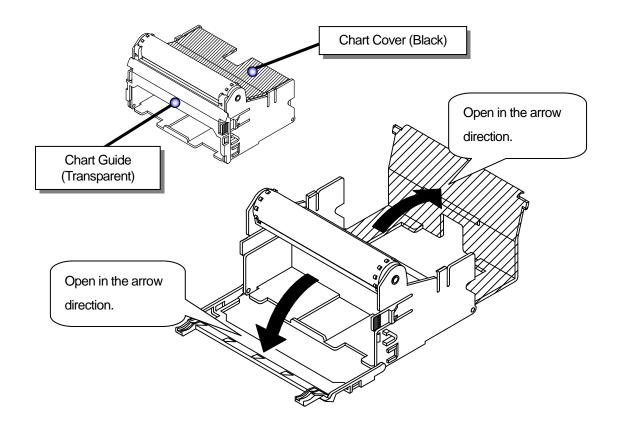

Fig. 5.4 Opening the Chart Cover and Chart Guide

(5) Loosening the chart paper

The chart paper may not be proper fed, if it is stuck at perforations. Be sure to loosen the paper.

Fig. 5.5 Loosening the Chart Paper

(6) Setting the Chart Paper into the Storage Chamber

Unfold the chart paper by two plies. Holding the printing surface upward, set it in the storage chamber.

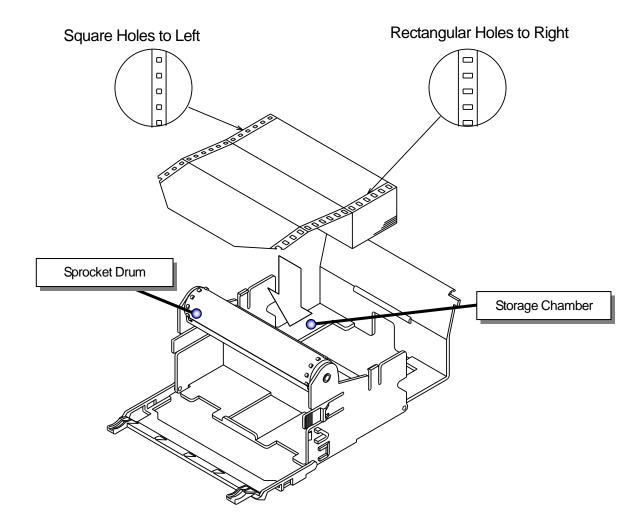

Fig. 5.6 Setting the Chart Paper

(7) Aligning the Chart Paper with the Sprocket Drum

Align the holes in the chart paper with the sprocket drum teeth. Set the chart paper along the sprocket drum. Put the first ply of the chart paper into the chart receiver.

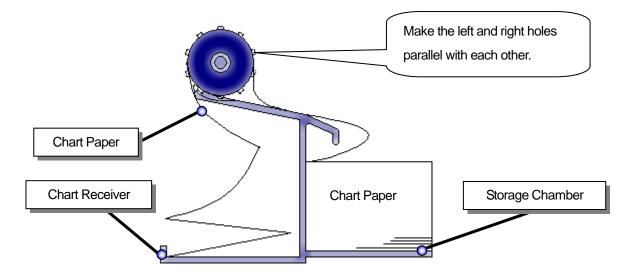

Fig. 5.7 Aligning the Chart Paper with Sprocket Drum (Chart Holder Sectional View)

(8) Closing the Chart Cover and Chart Guide

Close the chart cover and the chart guide in the arrow directions.

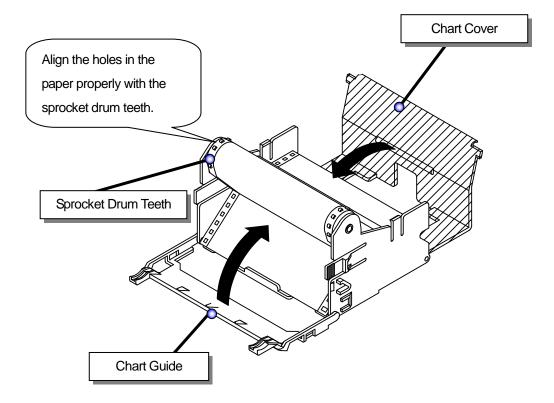

Fig. 5.8 Closing the Chart Cover and Chart Guide

(9) Turning the Sprocket Drum Gear

Check paper feed with your hand. Turn the sprocket drum gear to feed out the chart paper.

(It is recommended to feed the chart paper by 4 plies.)

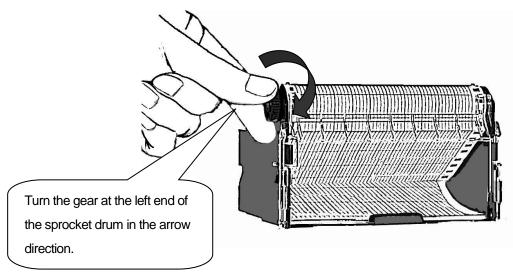

Fig. 5.9 Checking Paper Feed

(10) Putting Back the Chart Paper Holder

Push in the chart holder horizontally into the case until it is locked.

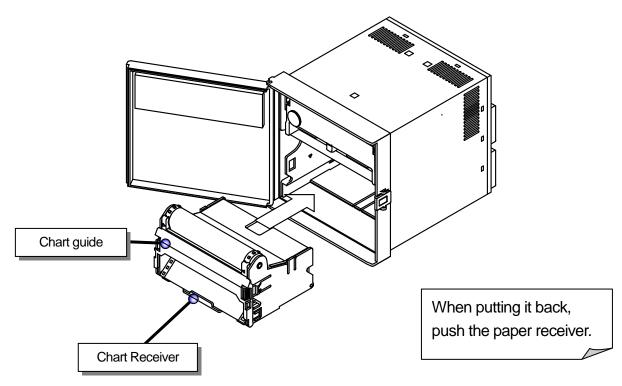

Fig. 5.10 Putting Back the Chart Holder

(11) Close the Door

Close the door and check a door lock.

(12) Pressing the "FEED" key to Check Paper Feed

Press the "FEED" key on the display keyboard to feed the chart paper.

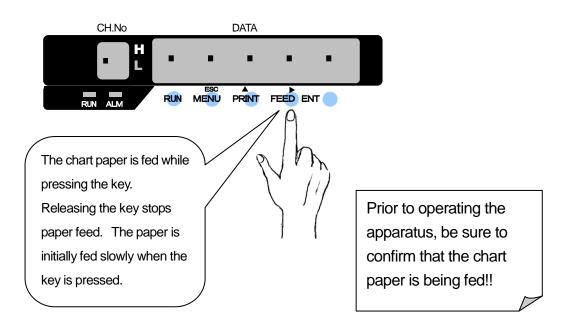

Fig. 5.11 Pressing the "FEED" key

(13) Pressing the "RUN" Key to Restart Operation

5.2 Setting the Ribbon Cassette

If the chart holder is taken out with recording operation being activated, the ink ribbon may be damaged. To replace the ribbon cassette, be sure to press the "RUN" key to stop recording. If the ribbon cassette is not set properly, the recording color may change or the ribbon may be damaged.

(1) Pressing the "RUN" key for 3 seconds or more

Stop recording. With the power turned on, press the "RUN" key for 3 seconds or more.

Once recording stops, the RUN lamp goes off.(See Fig. 5.1 on page 23)

(2) Opening the Door

Push the door hook to unlock the door. Pull the door to this side to open it. (See Fig.5.2 on page 23)

MARNING

Because you may be hurt when you put fingers at the time of the opening and closing of the door, please be careful.

Maximum angle of the door in opened-state is 135 degree. Do not further open the door otherwise hinge will be broken.

(3) Taking out the Ribbon Cassette

Grab the left side of the ribbon cassette. Holding down the ribbon holder, take out the ribbon

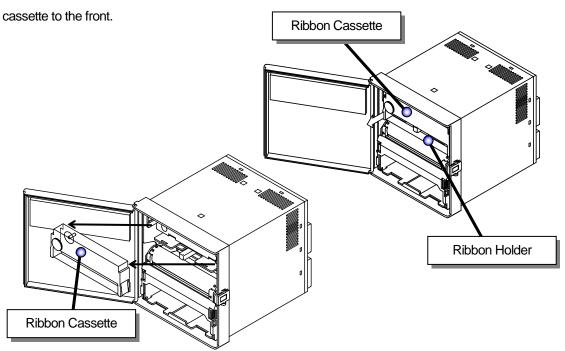

Fig. 5.12 Taking Out the Ribbon Cassette

(4) Unslacking the Ink Ribbon

Set the new ink ribbon. Turn the knob in the arrow direction to unslack the ink ribbon.

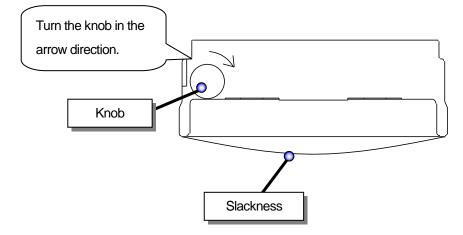

Fig. 5.13 Unslacking the Ink Ribbon

(5) Setting the Ribbon Cassette

Push the ribbon cassette into the ribbon holder until the latch clicks.

When the ribbon feed shaft is not easily fit in, turn the gear to the direction of an arrow to adjust the position. When this is done, push the ribbon cassette until the latch clicks

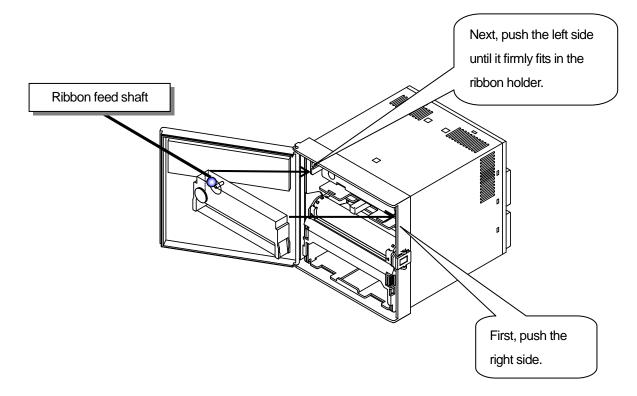

Fig. 5.14 Setting the Ribbon Cassette

6. OPERATION

6.1 Operation

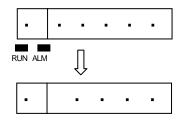

Prior to turning on the power, make sure that the supply voltage meets the specifications for the instrument and the instrument is properly grounded.

Prior to turning on the power, make sure that the chart paper is set in the chart holder. If the printer is activated with no chart paper set, the sprocket drum (cylindrical part) of the chart holder may

Once the power is turned on, the display on the front of the door is illuminated. The instrument will be ready to run (user mode) in about 5 seconds, including the initial screen. If the RUN lamp is unilluminated, press the "RUN" key to start recording operation.

6.1.1 Status after Initial Screen

- (1) Display screen :The "RUN" lamp keeps the condition of before power-off.
- (2) Printout data :All printing data and analog recording data of before power-off are cleared.
- (3) Alarm and Diagnosis :Alarm indications and outputs of before power-off are not recovered.
- (4) Data display and Channel number are displayd refer to Fig.6.1.

※Returning to the mode before the power OFF.

Fig. 6.1 Display Screen at Power-on

[Note]

- (1) When electric power failure occurs, the initialization is performed after power recovery. And it becomes the above initial state.
- (2) The printout data are eliminated in initialization. Printout operation is not continued after power recovery when the power is turned off during printout.
- ③ When the power is turned on, the display displays "0" while reading data in fig.6.1. The numeral of the display digit depends on the setting.

6.2 Recording

- ① The instrument checks zero point for every recording. If the printer block is manually moved during recording, a recording position may be dislocated.
- (2) In order to protect the chart paper, dot printing is not performed when the distance between the previous dot printing position and the next one for an identical channel is less than 0.4 mm in the chart paper feed direction or less than 0.5 mm in the scale direction.

6.2.1 Recording Colors

Table 6.1lists the recording colors for each channel in analog recording.You can select a recording color from 6 colors for every channel.

Channel No.	Color	
1	Purple	
2	Red	
3	Green	
4	Blue	
5	Brown	
6	Black	

Table 6.1 Recording Colors(standard)

6.3 How to Record

6.3.1 Starting/Stopping Recording Operation

To start/stop recording, press the "RUN" key.

To stop, hold down the "RUN" key for 3 seconds or more.

"RUN" lamp is unilluminated when step recording.

"RUN" lamp is unilluminated when stop recording.

[Note]

- 1 When the power is turned on, the previous state where you turned off is continued.
- (2) When controlling a start/stop of recording through Digital Input (DI, option), you cannot switch start/stop with the "RUN" key.

6.3.2 Feed the Chart Paper

The chart paper is fed while the "FEED" key is pressed, and stops when released.

6.3.3 Print Sample

Logging on print example and Alarm on print example

Prints alarm occurrence/recovery, channel number, alarm type, and level. ▲ denotes alarm occurrence (in red) and ▼ denotes alarm recovery (in purple), respectively.

Alarm Print:

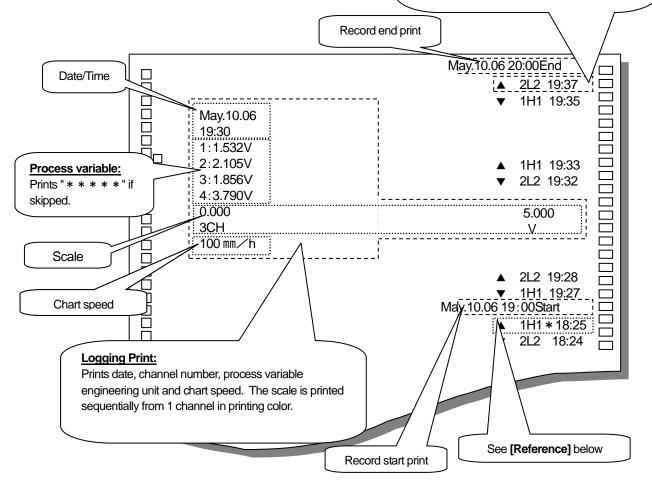

Fig. 6.2 Print Sample

[Reference]

Alarm print, Comment print, Date-and-Time print and Record Start/End print becomes waited-state if the other printing is actuated.

CR06 stores up to six items of Alarm Occurrence/Recovery print and five items of Comment/Date-and-Time/Record Start/Record end print. If printing commands are over, CR06 prints a marking " * " on the end of the last printing. This mark is meaning of that over items would not be printed. For priority of respective printing, see next page; Priority in Reference.

[Note]

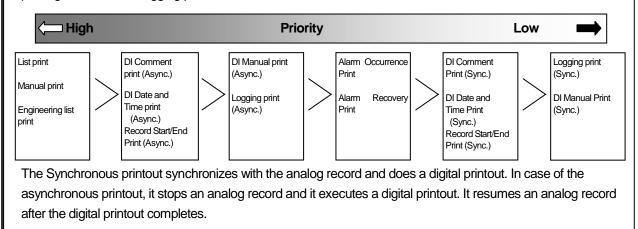

Logging print will not be the wait printing state. At the start time of Logging print, if the prior Logging print is printing, the next one cannot print. Prolong the printing interval of Logging print in this case.

6.4 Digital Print

The following digital prints operate by the key operation: Manual print Engineering list print The following digital prints operate by the DI input: DI Manual print DI Manual

[Reference]

Printing is actuated in following priority. See following Priority Order. When multiple types of printing are activated simultaneously, higher-priority printing takes effect first according as following order. In alarm printing activation, lower category (Logging, DI Manual) also is activated. (See Fig. 6.2 that is example : Same time printing of Alarm and Logging print).

6.4.1 Manual Print

Print the following data on the chart paper:

- Time/date (year, month, day)
- Channel number or activated alarm type, latest process variable, engineering unit (all channels)
- (1) Manual print operating procedure
 - 1 Press the "PRINT" key.
 - (2) Use the "PRINT" key to display " $\cdot \ \cdot \$ ", and press the "ENT" key.

③ Use the "PRINT" key to select "· · · · ". Pressing the "ENT" key executes manual print.

Once manual print starts, the display is automatically returned to the Data Display screen.

Upon termination of manual print, it is returned to it was prior to starting manual print.

[Note]

- ① Analog recording is interrupted while manual print is running. However, measurement/alarm detection remains effective.
- ② If an alarm is activated while manual print is running, alarm print will be performed when recording restarts.

(2) Manual print stopping procedure

① Press the "PRINT" key.

② Use the "PRINT" key to display "· · · ", and press the "ENT" key.

③ Use the "PRINT" key to select "· · · · ". Pressing the "ENT" key stops manual print.

However, print operation continues until the line is completed. Manual print is stopped.

And the display returned it was prior to starting manual print.

$ \square$. 06 11:08				
	1:	11. 25mV	2:	0. 45mV		
	3:	0. 07mV	4:	0. 00mV		
	5:	—1.12mV	6:	0. 39mV		

Fig. 6.3 Manual Print

6.4.2 List Print

Print the following setting data of the instrument on the paper:

- Date/time/Chart speed/2nd chart speed/Printing cycle.
- Channel number/range/scaling value/engineering unit
- Setting alarm type

(1) List print operating procedure

① Press the "PRINT" key.

2 Use the "PRINT" key to display "· · · · ", and press the "ENT" key.

③ Use the "PRINT" key to select "· · · · ". Pressing the "ENT" key executes list print.

Once list print starts, the display is automatically returned to the Data Display screen.

Upon termination of list print, it is returned to it was prior to starting list print.

[Note]

- ① Analog recording is interrupted while list print is running. However, measurement/alarm detection remains effective.
- 2 If an alarm is activated while list print is running, alarm print will be performed when recording restarts.

(2) List print stopping procedure

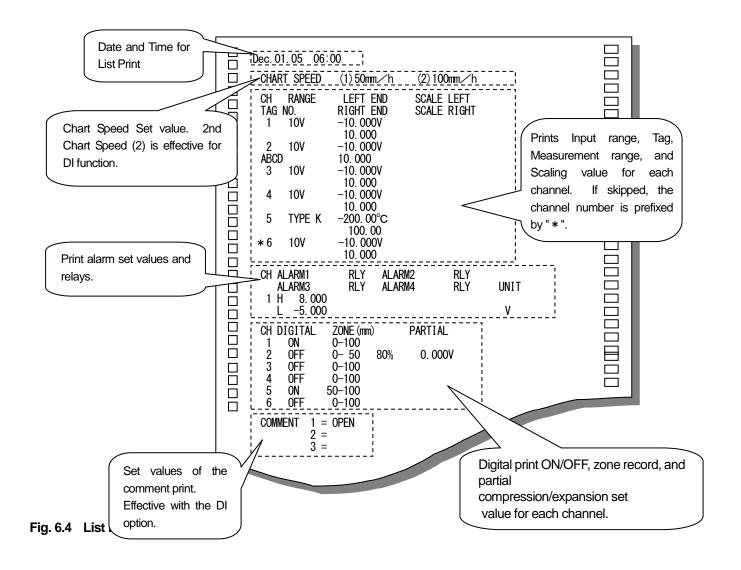

① Press the "PRINT" key.

(2) Use the "PRINT" key to display "· · · · ", and press the "ENT" key.

③ Use the "PRINT" key to select "· · · · ". Pressing the "ENT" key stops list print.

However, print operation continues until the line is completed. List print is stopped.

And the display returned to it was prior to starting list print.

6.4.3 Engineering List Print

Engineering list print provides the following setting data of the instrument on the chart paper.

- Analog recording
- Digital printing
- Burnout/RJC etc.

(1) Engineering list print operating procedure

- ① Press the "MENU" key.
- 2 Use the "PRINT" key to display "· · · · ", and press the "ENT" key.
- ③ Use the "PRINT" key to select "· · · · ". Pressing the "ENT" key executes engineering list print.

Once engineering list print starts, the display is automatically returned to the Data Display screen.

Upon termination of engineering list print, it is returned to it was prior to starting engineering list print.

[Note]

1 Analog recording is interrupted while engineering list print is running.

However, measurement/alarm detection remains effective.

(2) If an alarm is activated while engineering list print is running, alarm print will be performed when recording restarts.

(2) Engineering list print stopping procedure

1 Press the "MENU" key.

② Use the "PRINT" key to display "· · · · ", and press the "ENT" key.

③ Use the "PRINT" key to select "· · · · ". Pressing the "ENT" key stops engineering list print.

However, print operation continues until the line is completed.

Engineering list print stopped. And the display returned to it was prior to starting engineering list print.

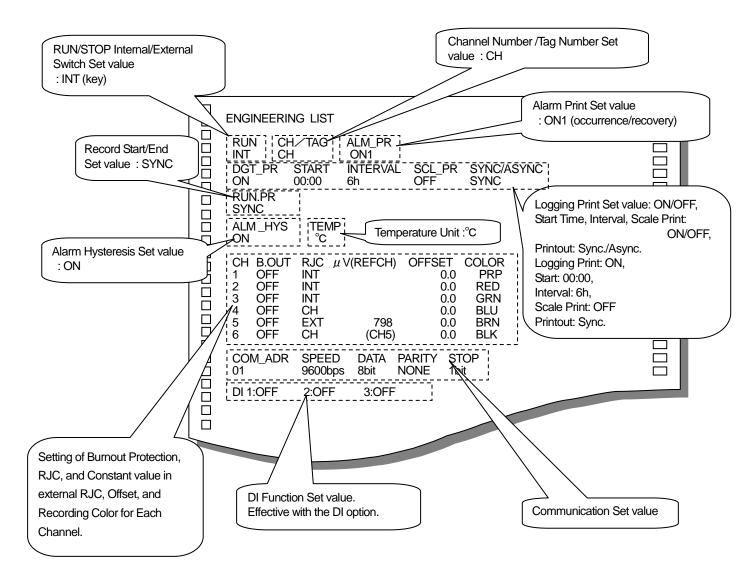

Fig. 6.5 Engineering List Print

6.4.4 Record Start/End Print

Record Start/End print the beginning (or ending) time on the chart paper when beginning (or ending) to record. Record Start/End operation is set in the engineering mode. (Refer to 7.2.6 "Record Start/End print")

"•••• " Record start print is synchronous print.

Record end print is asynchronous print.

".... Record Start/End print is asynchronous print.

"••• "..... Record Start/End print is not done.

(1) Record start print

When the record begins, the recorder prints the start time.

(2) Record end print

When the record is ended, the recorder prints the end time.

[Note]

When the record operation is not a key but DI, the print is done by the operation by DI.

6.4.5 DI Manual Print (option)

DI manual print prints measurements and time on paper by turning on DI.

The content of the print is the same as 6.4.1 "Manual Print".

(1)"DI function" of the engineering mode is set.

Please refer to 7.2.9 "DI Functions" for details.

"••••• "...... Manual print is synchronous print.

".... Manual print is asynchronous print.

(2)DI is operated.

DI manual print is printed by turning on DI.

6.4.6 DI Date/Time Print (option)

DI Date/Time print prints date and time on paper by turning on DI.

(1)"DI function" of the engineering mode is set.

Please refer to 7.2.9 "DI Functions" for details.

"•••• "...... Date/Time print is synchronous print.

"•••• "...... Date/Time print is asynchronous print.

(2)DI is operated.

DI manual print is printed by turning on DI.

6.4.7 DI Comment Print (option)

DI Comment print prints time and comment on paper by turning on DI.

The content of comment is set to the setup mode.

(1)"DI function" of the engineering mode is set.

Please refer to 7.2.9 "DI Functions" for details.

"•••••","••••","••••","••••"Date/Time print is asynchronous print.

(2)DI is operated.

DI manual print is printed by turning on DI.

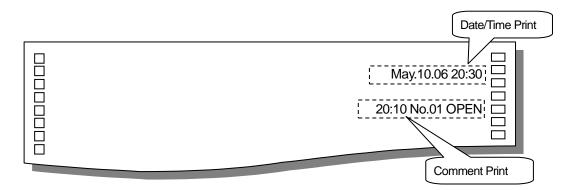

Fig. 6.6 Date/Time print, Comment print

6.5 Changing the Display

Display selection procedure

① Press the "MENU" key to display "· · · · ", and press the "ENT" key.

② Use the "PRINT" key to select a required display screen from the menu below.

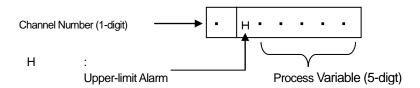

Press the "ENT" key.

③ "• • □" is displayd in case of manual display. Use the "PRINT" key to select the channel number. Press the "ENT" key.

- "••••"(AUTO) : Auto display
- "• • "(MAN) : Manual display
- "••• "(DATE) : Date display
- "• • "(TIME) : Time display
- "• "(OFF) : Display off

6.5.1 · · · · < Auto Display>

Displays the process variable of each channel sequentially at intervals of 2.5 seconds.

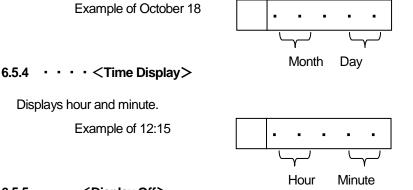

6.5.2 · · · < Manual Display>

Displays the process variable of specific channel, it updates every measurement cycle.

The data is the same as Auto display. Pressing the "ENT" key changes the displayd channel number (it increments).

6.5.3 · · · · <Date Display>

Displays the month and day. Leap year adjustment is automatic.

6.5.5 · · · < Display Off>

Turns off the process variable display. Key operation is the same as usual. To switch to other display, take steps ① through ③ mentioned above.

7. DEVICE SETTING

7.1 Setting the Setup Mode

Key Operation for Entering the Setup Mode					
Press the "MENU" key for 3 seconds or more to enter the setup mode.					
At the time, displays the version of the software approximately 1 seconds as below. After, displays the					
setting screen of the range.					
To return from the setup mode to the recording mode (user mode), press the "MENU" key for 3 seconds or more again.					

The following describes how to set the following items.

The following shows a display map of the setup mode. Use the \triangle key to operate.

• 7.1.1 Setting the Range

Setting	Channel	Mode]
		 Input 	Current/ Vol Scaling Square Roo Decade Difference Sum Average

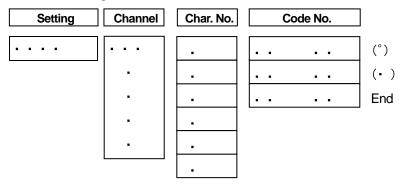

Current/ Voltage Input Thermocouple Input Resistance temperature detector Scaling Square Root Decade Difference Sum

• 7.1.2 Setting the Alarm

Option

Setting	Channel	Level	ON/OFF	Туре	Setting value	Relay ON / OFF	Relay No.
		· · · · · ·	•••	•			· · · ·

• 7.1.3 Setting the Unit

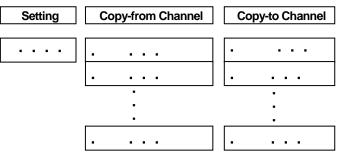

• 7.1.4 Setting the Chart Speed

Setting	1st/2nd Chart speed	Chart speed
••••		••••

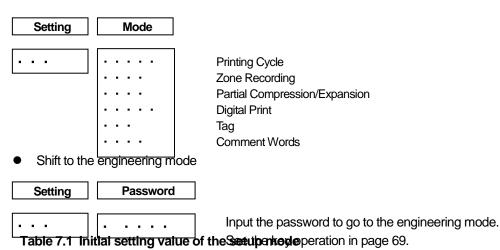

• 7.1.5 Setting the Date and Time

Setting	Year	Month, Day	Time

• 7.1.6 Copying the Setting Data

 7.1.7 Setting Other Functions (Printing Cycle, Zone Recording, Partial Compression/Expansion, Digital Print, Tag, Comment Words)

Setting items	Initial set	Remarks
★Range (all channels)	±10mV Scaling 0∼100.0 (°C)	
★Alarm (all channels)	All levels are alarm OFF, relay OFF	
\star Engineering unit (all channels)	°C(BF 43 00)	
★Chart speed	(1) 20mm/h (2) 20mm/h	
★Time	2000/01/01, 00:00	Sets up the present time. (Japan standard time) GMT+09:00
★Dot point interval	10 (s)	
★Zone setting (all channels)	0~100 (%)	
★Partial compression/expansion (all channels)	OFF	
★ Digital print (all channels)	ON	
\star Tag print character (all channels)	"Blank until the 7th character"	
★Comment print word (1~3)	"Blank until the 16th character"	

7.1.1 Setting the Range

(1) Setting method

With a multirange system, setting the range for each channel is possible.

Use the Δ key to shift the mode (1) to (1) shown in the Table below.

Set the range from the following input signals. (mode (1) to (3))

DC voltage	: ± 10 , 0 to 20, 0 to 50, ± 200 mV DC, ± 1 , 0 to 5, ± 10 V DC
------------	---

DC current : 4 to 20 mA DC (External shunt resistor: 250 Ω)

Thermocouple : B, R, S, K, E, J, T, C, Au-Fe, N, PR40-20, PL II , U, L

Resistance temperature detector : Pt100, JPt100

Set scaling, decade, square root, interchannel sum/difference/average. (mode ④ to ⑨)

Unnecessary channels can be skipped. (mode 10)

Setting	Channel		Mode	Key
		1	•••• (Voltage, Current)	∆key
		2	• • (Thermocouple)	Ļ
		3	•••• (Resistance temperature detector)	Ļ
	•••	4	•••• (Scaling)	Ļ
		5	•••• (Square root)	Ļ
		6	· · · · · (Decade)	Ļ
		\bigcirc	• • • • (Difference)	Ļ
		8	•••• (Sum)	Ļ
	Setting for all		•••• (Average)	Ļ
	channels	10	···· (Skip)	Ļ

[Note]

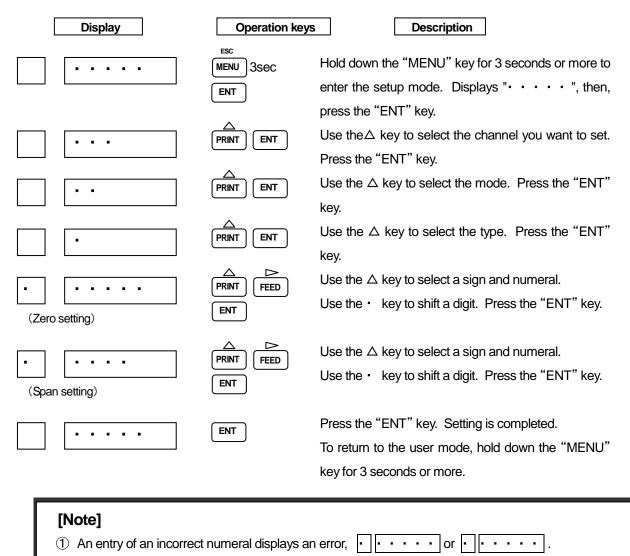

A decimal point position can be arbitrary setup only in the "scaling" and "square root" modes. When you want to alter the decimal point position in Voltage/Current/Thermocouple/Resistance temperature detector input set it in the "scaling" mode. To fix the decimal point position, set as follows.

Input	Decimal Place	Decimal Places		Decimal Places	
mV	2nd place	* * * . * *	Thermocouple	1st place	* * * * . *
±1,0~5V	3rd place	* * . * * *	RTD	1st place	* * * * . *
±10V	2nd place	* * * . * *	±200mV DC	1st place	* * * * . *
mA	2nd place	* * * . * *			

(2) · · · · (Current/Voltage), · · (Thermocouple), · · · (Resistance Temperature Detector)

Measurs Current, Voltage, Thermocouple and RTD.

Example) When setting Thermocouple T for Channel 1(T :-100 to 300 °C)

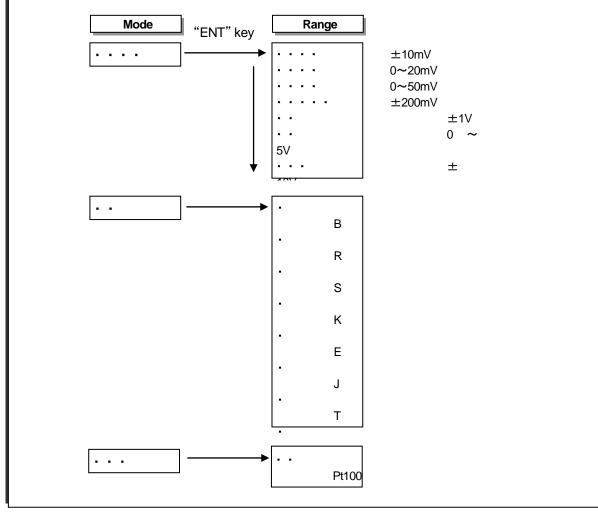

Press the "ENT" key and re-enter a correct numeral.

② For the range setting (When especially, don't change a decimal point position at the thermocouple or in RTD) which doesn't have the necessity of the scaling, don't set a scaling.

[Note]

In the \cdots , \cdots , or \cdots mode, press the "ENT" key to select the range. Use the \triangle key, you can select the type out of the range.

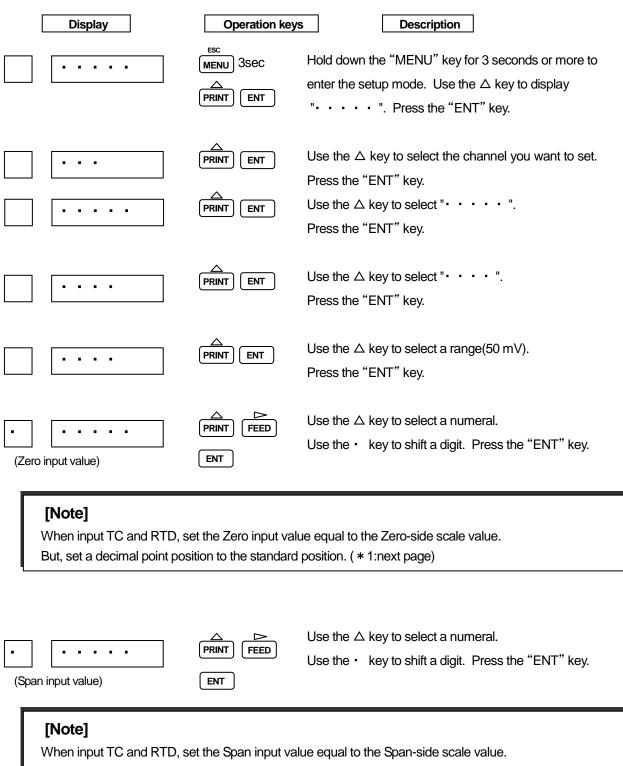

(3) · · · · · (Scaling)

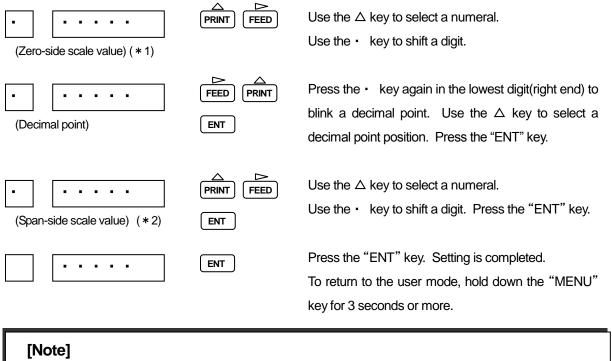

Changes the input of VOLT, TC and RTD into a quantity.

Setting the unit is possible. (See 7.1.3 on page 58)

Example) When setting the voltage of 0 to 40 mV and scale of 000.00 to 100.00 for Channel 1.

But, set a decimal point position to the standard position. (*2:next page)

An entry of an incorrect numeral displays errors $\bullet \bullet \bullet \bullet \bullet \bullet$ or $\bullet \bullet \bullet \bullet \bullet \bullet$ or $\bullet \bullet \bullet \bullet \bullet \bullet \bullet$. Press the "ENT" key and re-enter a correct numeral.

(4) · · · · (Square Root)

Caluclates the square root of Volt input, and scaling that value.

Setting the unit is possible. (See 7.1.3 on page 58)

Example) When setting the voltage of 0 to 40 mV and scale of 000.00 to 100.00 for Channel 1.

Display	Operation key	/s Description
	ESC MENU 3SEC PRINT ENT	Hold down the "MENU" key for 3 seconds or more to enter the setup mode. Use the \triangle key to display "•••••". Press the "ENT" key.
		Use the \triangle key to select the channel you want to set. Press the "ENT" key.
	PRINT ENT	Use the \triangle key to select "••••". Press the "ENT" key.
		Use the \triangle key to select a range(50 mV). Press the "ENT" key.
(Zero input value)	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
(Span input value)	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
(Zero-side scale value)		Use the Δ key to select a numeral. Use the \cdot key to shift a digit.
(Lefe dide deale value) (Decimal point)	FEED PRINT ENT	Press the \cdot key again in the lowest digit(right end) to blink a decimal point. Use the \triangle key to select a decimal point position. Press the "ENT" key.
(Span-side scale value)	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
	ENT	Press the "ENT" key. Setting is completed. To return to the user mode, hold down the "MENU" key for 3 seconds or more.

[Note]

An entry of an incorrect numeral displays errors $\bullet \bullet \bullet \bullet \bullet \bullet$ or $\bullet \bullet \bullet \bullet \bullet \bullet$ or $\bullet \bullet \bullet \bullet \bullet \bullet \bullet$. Press the "ENT" key and re-enter a correct numeral.

About Square Root Computation

The square root computation is as follows:

- Each item is defined as follows:
 - SPAN L : Span lower-limit value (Span L)
 - SPAN $_{R}$: Span upper-limit value (Span R)
 - SCAL L : Scaling lower-limit value (Scale L)
 - $SCAL_R$: Scaling upper-limit value (Scale R)
 - IN : Input voltage
 - OUT : Output (Scaling value)
- When an input value is 1 % or more (1 to 100 %)

$$OUT = (SCAL_{R} - SCAL_{L}) \times \sqrt{\frac{IN - SPAN_{L}}{SPAN_{R} - SPAN_{L}}} + SCAL_{L}$$

• When an input value is less than 1 %

$$OUT = \frac{10 \times (SCAL_{R} - SCAL_{L})}{SPAN_{R} - SPAN_{L}} \times (IN - SPAN_{L}) + SCAL_{L}$$

Example) When makes setting in previous page, the display is as follow table.

Input voltage (mV)	0	10	20	30	40
Display (%)	0. 00	50. 00	70. 71	86. 63	100. 00

[Note]

The relation between scaling factor and displaying digit may stagger the accuracy rating.

(5) • • • • • (Decade)

Scaling the VOLT input and displays the index number. Setting the unit is possible. (See 7.1.3 on page 58) Example) When setting the voltage of 0 to 5 V and decade of 1.0×10^{0} to 1.0×10^{5} for Channel 1.

Display	Operation keys	Description
	MENU 3Sec	Hold down the "MENU" key for 3 seconds or more to
		enter the setup mode. Use the \triangle key to display "••••". Press the "ENT" key.
	PRINT ENT	Use the Δ key to select the channel you want to set. Press the "ENT" key.
		Use the \triangle key to select "•••••". Press the "ENT" key.
•••		Use the \triangle key to select a range(5V). Press the "ENT" key.
(Zero input value)	PRINT FEED ENT	Use the Δ key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
(Span input value)	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
(Zero-side scale value)	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
Span-side scale value)	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
	ENT	Press the "ENT" key. Setting is completed. To return to the user mode, hold down the "MENU" key for 3 seconds or more.
[Note]		

An entry of an incorrect numeral displays errors	• •	• •	•	•	or	•	•	• •	•	•	or	•	• •	•	•	•	
Press the "ENT" key and re-enter a correct nume	eral.																

About Decade Display

XX: Mantissa section (1.0 to 9.9) YY: Exponent section (-19 to 19) Up to 5 decades. (Scaling upper limit)—(Scaling lower limit) is 1.0E5 or less.

• Decade display abides by the following relational expression.

 $\begin{array}{l} \text{OUT1} = \text{IN} \times \\ \text{OUT} = 10^{\text{OUT1}} \end{array} \xrightarrow{\begin{array}{c} \text{LG} \text{SCAL}_{R} - \text{LG} \text{SCAL}_{L} + \\ \text{SPAN}_{R} - \text{SPAN}_{L} \end{array}} \xrightarrow{\begin{array}{c} \text{SPAN}_{R} \times \text{LGSCAL}_{L} - \text{SPAN}_{L} \times \text{LGSCAL}_{R} \\ \text{SPAN}_{R} - \text{SPAN}_{L} \end{array}} \\ \text{LG} \text{SCAL}_{L} & : \text{Log}_{10}(\text{SCAL}_{L}) \\ \text{LG} \text{SCAL}_{R} & : \text{Log}_{10}(\text{SCAL}_{R}) \end{array}$

[Note]

Decade output is used for display and print. It is not reflected on a printing position.

Example) When makes setting in previous page, the display is as follow table.

Input voltage (V)	0. 0	1. 0	2. 5	3. 0	5. 0
Display	1. 0E0	1. 0E1	3. 2E2	1. 0E3	1. 0E5

(6) · · · · (Difference), · · · · (Sum), · · · · (Average)

Caluclates the input of VOLT, TC, RTD or SCALE, and output.

Example) When subtracting the Ch 1 input data from the Ch 6 input data to set the

difference (0 to 40 mV). Records and displays on Ch 6 "Ch 6 (input) - Ch 1 (input)".

Display	Operation key	s Description
	ESC MENU 3SEC PRINT ENT	Hold down the "MENU" key for 3 seconds or more to enter the setup mode. Use the \triangle key to display "•••••". Press the "ENT" key.
(Setting channel)	PRINT ENT	Use the \triangle key to select the channel you want to set. Press the "ENT" key.
		Use the \triangle key to select "••••". Press the "ENT" key.
(Reference channel)		Use the \triangle key to select the "channel you want to subtract." Press the "ENT" key.
 Zero input value after difference operation) 	PRINT FEED ENT	Use the Δ key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
(Span input value after	PRINT FEED ENT	Use the \triangle key to select a numeral. Use the \cdot key to shift a digit. Press the "ENT" key.
difference operation)	ENT	Press the "ENT" key. Setting is completed. To return to the user mode, hold down the "MENU" key for 3 seconds or more.

[Note]

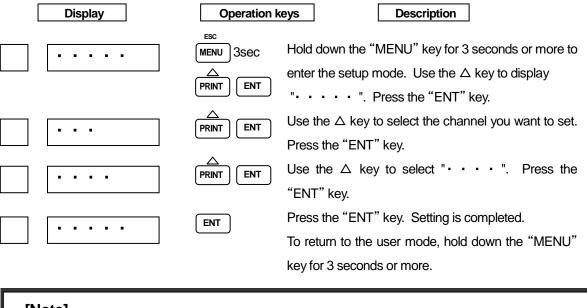

About Difference, Sum, and Average

- The channel to be set must be larger than the one on which computes the "difference, sum, or average". When setting Channel 6, for example, you can subtract the Channel 1 to 5 value.
- The range and scale of the set channel is the same as the channel on which computes the "difference, sum, and average".
- A range value after the computation cannot exceed the maximum range of the instrument.
- Set for the reference channel only the voltage, current, thermocouple, resistance temperature detector, and their scaling ranges.

(7) • • • • (Skip)

Setting SKIP on the Channel does not display and recording.

Example) When skipping Channel 6.

[Note]

- Setting all the channels to Skip displays an error,
 At least, one channel should be set to measurement.
- The skip channel conducts measurement, but does not provide display, print, or alarm judgment. If input is not connected, short-circuit a measurement terminal.
- It is not possible to return it based on the setting skipped once. Please set range again.

7.1.2 Setting the Alarm

Setting items

Alarm setting to the following two types for each channel is possible.

Alarm point can set up 4 levels for each channel.

Once sets up the alarm point, illuminated "ALM" when a process variable reaches alarm point, and simultaneously, outputs the alarm print indicating an alarm occurrence to the chart paper.

- : Upper-limit alarm ----When the process variable is higher than the alarm set point, issues an alarm.
- : Lower-limit alarm ----When the process variable is lower than the alarm set point, issues an alarm.

Operation

Setting Channel Level ON/OFF Type Setting value Relay ON/OFF	Relay No.
$\begin{array}{ c c c c c c c c c c c c c c c c c c c$	

Example) When setting for the Channel 1 alarm point (Level 1) the upper-limit alarm, set value of -2.000, and alarm output relay No. 1.

	Display	Operation keys	Description
	••••	ESC MENU 3Sec PRINT ENT	Hold down the "MENU" key for 3 seconds or more to enter the setup mode. Use the \triangle key to display "•••••". Press the "ENT" key.
	•••	PRINT ENT	Use the \triangle key to select the channel you want to set. Press the "ENT" key.
•	••		Use the \triangle key to select an alarm level. Press the "ENT" key. Up to 4 levels can be set.
•	••		Use the \triangle key to select alarm setting ON. Press the "ENT" key. Setting "••• "displays
•	•		"•••• " and completes setting. Use the \triangle key to select an alarm type. Press the "ENT" key.
·	••••	PRINT FEED	Set an alarm point. Use the \cdot key to shift a digit, and use the \triangle key to select a numeral. Once setting is completed, press the "ENT" key. A decimal point
			position is fixed depending on the range.

х

Option

[Note]

When the "ENT" key is pressed in setting the alarm point. Display will be switched to the next setting display.

Setting hereinafter is valid only for the model to which an alarm output relay option has been attached. If the option has not been set, press the "ENT" key until "•••••" is displayd.

Then, press the "ENT" key once more. Setting is completed.

	Display	Operation keys	s Description
·	••	PRINT ENT	When an alarm occurs, issues the alarm output from the alarm output relay. Use the \triangle key to select alarm output ON and press the "ENT" key. If the alarm output is not used, select OFF and press the "ENT" key.
·	•	PRINT ENT	If the alarm output is set to ON, set the relay number. Use the \triangle key to select the relay number out of 1 to 6, and press the "ENT" key.
	••••	ENT	Press the "ENT" key. Setting is completed. When you want to continue to set for other channel, press the \triangle key to select the channel, and start setting. To return to the user mode, hold down the "MENU" key for 3 seconds or more.

[Note]

The tag setting does not effect on Alarm print setting. Prints channel numbers every time.

7.1.3 Setting the Unit

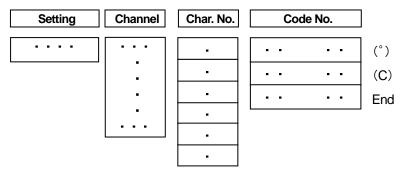

Setting Items

Set the unit for each channel.

[Note]

If you change the unit in the range of • • • • , • • or • • • , setting the range to • • • • • .

Operation

Example) Setting the unit(°C) for Channel 1.

[Display	Operation keys	s Description
	••••	ESC MENU 3SEC PRINT ENT	Hold down the "MENU" key for 3 seconds or more to enter the setup mode. Use the \triangle key to display "••••". Then, press the "ENT" key.
	•••		Use the \triangle key to select the channel you want to set. Then, press the "ENT" key.
•	(Code No.)		Use the \triangle or \cdot key to select the 1st character of the code number, and press the "ENT" key. See Characters Code Table on the next page.
•	••••	PRINT FEED ENT	Set the 2nd character in the same manner.
·	••••	PRINT FEED ENT	When the number of unit characters is less than 6, enter a code(•••) to end. Press the "ENT" key.
	••••	ENT	Press the "ENT" key. Setting is completed. To return to the user mode, hold down the "MENU" key for 3 seconds or more.

[Note]

The unit setting effects only when the range setting is • • • • , • • • • or • • • • (including • • • • , • • • • and • • • • selected • • • • as the reference channel). When the range setting is others, the unit sets appropriate unit for the range automatically.

7.1.5 Setting the Date and Time

Operation

The following describes how to set the date/time of the internal clock.

Setting	Year	Month, Day	Time
••••	• • • • •	• • • • • •	• • • • • •

Example) When setting the date and time to January 1st, 2000, 6:00.

	Display	Operation keys	Description		
	••••	ESC MENU 3SEC	Hold down the "MENU" key for 3 seconds or more to enter the setup mode. Use the Δ key to display		
•			"•••••," and press the "ENT" key. Set the year. Use the \triangle key to select a numeral, and use the • key to shift a digit. Press the "ENT" key.		
•	••••	PRINT FEED	Set the month and day. Operate in the same manner as setting the year.		
•	••••	PRINT FEED	Set the time (hours and minutes). Operate in the same manner as setting the year.		
	••••	ENT	Press the "ENT" key. To return to the user mode, hold down the "MENU" key for 3 seconds or more.		
	[Note] If you enter a non-existent dates or time, displays an error • • • • • • • . Press the "ENT" key and re-enter a correct numeral.				

7.1.6 Copying the Setting Data

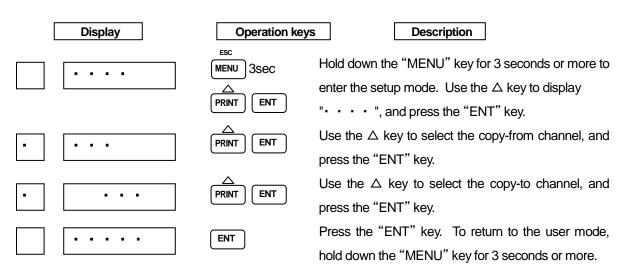

Setting Items

The following describes how to copy the setting data of any channel to other channel. The copy-to channel must be bigger than the copy-from channel.

Operation

Example) When copying the setting data of Channel 1 to Channel 2.

7.1.7 Setting Other Functions

Setting other functions as follows is possible.

Setting Items

 $(1) \cdot \cdot \cdot \cdot \cdot$ (Printing cycle)

Select a printing cycle from among 10, 20, 30, and 60 seconds.

(2 · · · · (Zone recording)

The data for each channel can be recorded separately in another area so that they will not overlap.

③ · · · · (Partial compression/expansion)

Record the measured data of the channel, partially compressed/expanded.

④ · · · · (Digital print)

Specify with ON/OFF whether the measured data for each channel is to be printed or not.

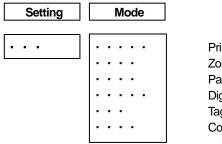

(5) · · · (Tag)

Set the tag, which is to be printed instead of a channel number, for logging print or manual print. Setting up to 7 characters (select from character code table on page 59), as the tag for each channel is possible.

6 · · · · (Comment words)

Set the comment words to be printed by DI. There are three kinds of comment words and setting up to 16 characters (select from character code table on page 59) for each DI is possible.

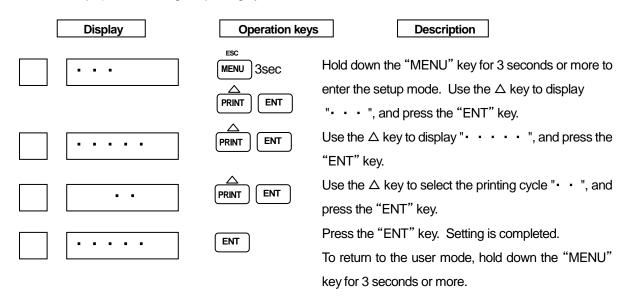

Operation

Printing Cycle Zone Recording Partial Compression/Expansion Digital Print Tag Comment Words

(1) · · · · · (Printing Cycle)

Example) When setting the printing cycle to 60 seconds.

(2) · · · (Zone Recording)

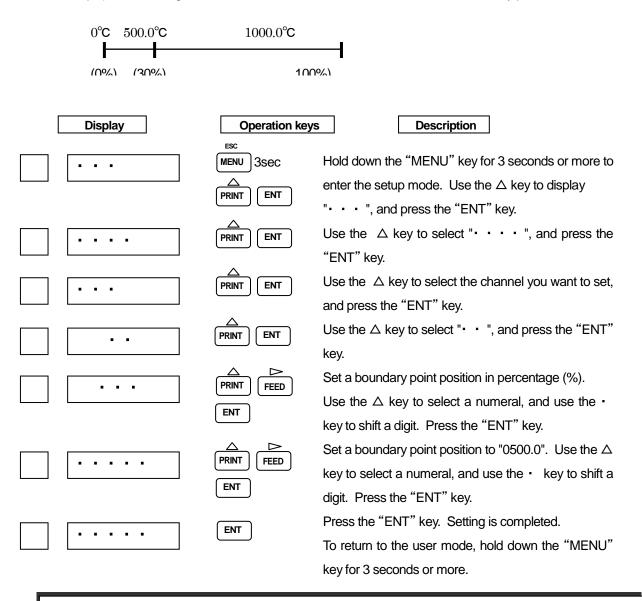

Example) When setting the instrument so that Channel 1 zero/span will be recorded at the position of 20 to 50 %.

Display	Operation key	/s Description
	MENU 3Sec	Hold down the "MENU" key for 3 seconds or more to enter the setup mode. Use the \triangle key to display
		"••• ", and press the "ENT" key. Use the \triangle key to display "••• ", and press the "ENT" key.
		Use the \triangle key to select the channel you want to set, and press the "ENT" key.
(Setting of Left-end Position)	PRINT FEED ENT	Set a zero point printing position in percentage (%). Use the \triangle key to select a numeral, and use the \cdot key to shift a digit. Press the "ENT" key.
Setting of Right-end Position)	PRINT FEED ENT	Set a span printing position in percentage (%). Operate in the same manner as setting the zero point printing position.
	ENT	Press the "ENT" key. Setting is completed. To return to the user mode, hold down the "MENU" key for 3 seconds or more.
[Note] If you enter an incorrect nu	meral, displays erro	$rs \cdot \cdot \cdot \cdot \cdot or \cdot $

Press the "ENT" key and re-enter a correct numeral.

(3) · · · · (Partial Compression/Expansion)

Example) When setting Channel 1 scale of 0 to 1,000.0 °C to 500.0 °C at a boundary point of 30 %.

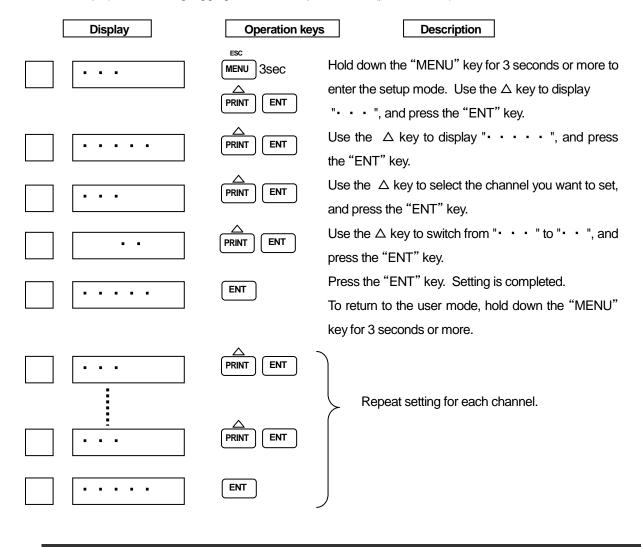

[Note]

If you enter an incorrect numeral, displays an error lacksquare lacksquare . Press the "ENT" key and re-enter a correct numeral.

(4) · · · · (Digital Print)

Example) When setting logging channel data print to "ON" (print enabled) for all the channels.

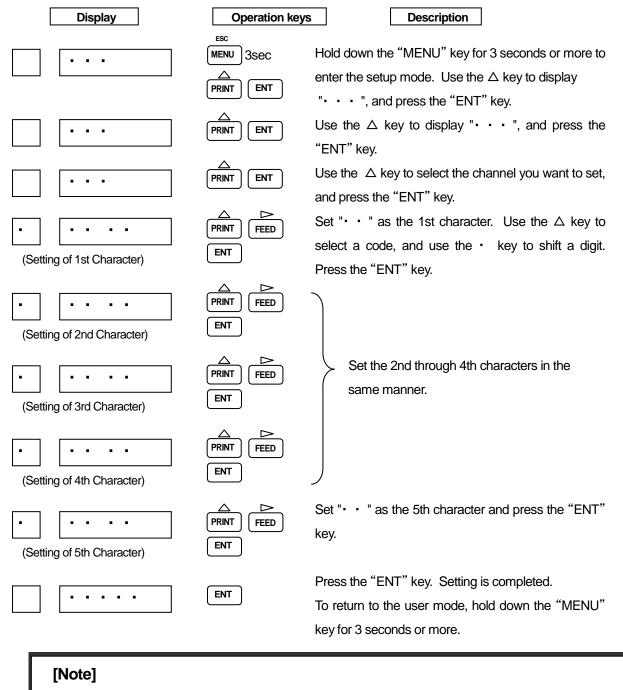

[Note]

The data for the channel to be skipped is printed " * ".

(5) • • • (Tag)

Example) When setting "ABCD" for Channel 1.

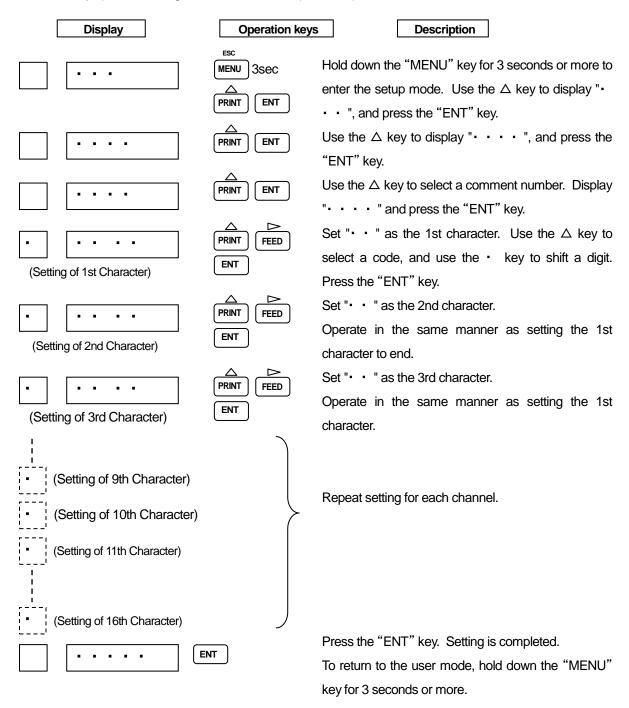

~ <u>· ~ · · · ·</u> · ·

When the number of tag characters is less than 7, set the "••• " code next to the last characters. See page

(6) · · · · (Comment Words)

Example) When setting "ON" for Comment $1(\cdot \cdot \cdot \cdot)$.

[Note]

- When the number of comment characters is less than 16, set the "• " code next to the last characters. See page 59 for Character Code Table.
- The digit is not display after setting the "• ".
- The comment setting is not effective without the DI option. Do not set the comment setting.

7.2 Setting the Engineering Mode

Key Operation to Enter the Engineering Mode

Hold down the "MENU" key for 3 seconds or more to enter the setup mode.

Use the \triangle key to select "••• ", and press the "ENT" key then to display "0000".

Use the \triangle key to alter a numeral, and the • key to shift a digit, enter the password "2222".

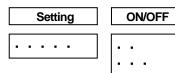

Press the "ENT" key then to display blinking "•••••".

Press the "ENT" key. After reset, enter the engineering mode.

The following describes how to set the following items.

The following shows a display map of the Enginneering mode. Use the \triangle key to operate.

• 7.2.1 Alarm Hysteresis

Set the hysteresis width Cancel the hysteresis width

• 7.2.2 Burnout ON/OFF

★Temperature unit	Centigrade Unit	

7.2.1 Alarm Hysteresis

Setting 0.5 % hysteresis to the values at alarm activation and alarm recovery is possible. (Common to all the alarms)

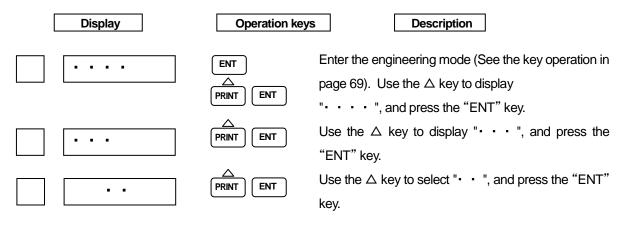

Example) When turning off alarm hysteresis.

7.2.2 Burnout ON/OFF

Setting Burnout High (to deflect the recording over the span) for each channel is possible.

Example) When setting Burnout High for Channel 4.

7.2.3 Channel Offset

For channel offset setting, set the value to be added to an actual process variable. Example) When setting the value (3.0) to be added to Channel 3.

Display	Operation key	s Description
••••		Enter the engineering mode (See the key operation in page 69). Use the \triangle key to display "•••••", and press the "ENT" key.
•••		Use the \triangle key to select "•••", and press the "ENT" key.
••••	PRINT FEED ENT	Use the \triangle key to alter a sign/numerical value or shift a decimal point. Use the • key to shift a digit. Once the numerical value is decided, press the "ENT" key.

7.2.4 Reference Junction Compensation

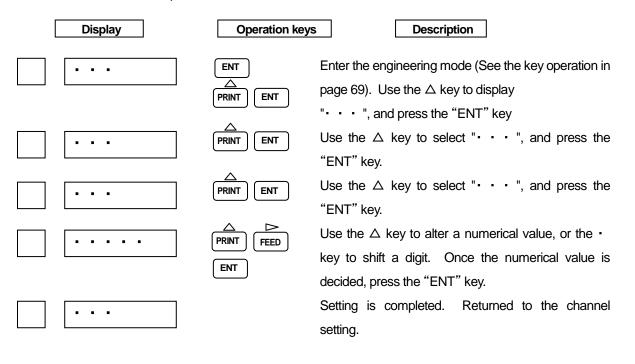

The following describes how to set the method for compensating an electromotive force generated between a thermocouple wire or compensation lead wire and a terminal. There are the following three compensating methods:

- A method to compensate through the built-in temperature sensing element (INT: Internal compensation)
- A method to compensate by keeping an external compensator's temperature constant (EXT: External compensation)
- A method to compensate by one input for the recorder temperature which gets external junction box. (CH: Channel input compensation)

Internal compensation (INT) has been initially set.

Example) When setting the external compensator's temperature constant voltage for Channel 6 to

391 μ V. Input the thermocouple T, compensate the external compensator's temperature 10°C and Input the electromotive force 391 μ V.

Example) When Channel 1 input compensates Channel 6 reference junction.

Display	Operation key	S Description
•••	ENT PRINT ENT	Enter the engineering mode (See the key operation in page 69). Use the \triangle key to display "••••", and press the "ENT" key.
•••		Use the \triangle key to select "•••", and press the "ENT" key.
••		Use the \triangle key to select "•••", and press the "ENT" key.
•••		Use the \triangle key to select "•••", and press the "ENT" key.
•••		Setting is completed. Returned to the channel setting.

7.2.5 Changing the Printing Color

Change a printing color can be changed for each channel. Example) When setting the black color as a printing color.

Display	Operation keys	Description
••••	ENT PRINT ENT	Enter the engineering mode (See the key operation in page 69). Use the \triangle key to display "•••••", and press the "ENT" key.
•••		Use the \triangle key to select "•••", and press the "ENT" key.
•••		Use the \triangle key to display "••••", and press the "ENT" key.
••••	PRINT FEED	Setting is completed. Returned to the Printing Color Setting screen.

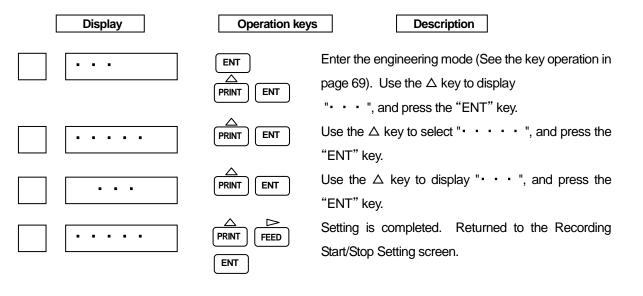

7.2.6 Settings Related to Recording

Setting a recording start/stop trigger, select tag/channel print selection, alarm print, logging print, and scale print ON/OFF is possible.

(1) Recording start/stop trigger setting

Set whether the trigger of recording start/stop should be by the "RUN" key or DI.

Example) When setting DI as the recording start/stop trigger.

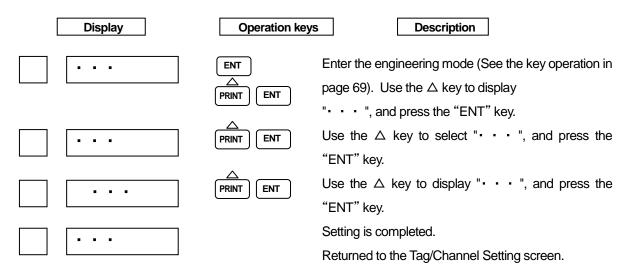

[Note]

When displays "••••", "RUN/STOP" key does not operate. Set "•••" to DI. See DI functions in page 80.

(2) Tag/channel print selection

In case of logging print; or manual print, set whether a tag or channel should be printed. Example) When setting the tag.

(3) Alarm print ON/OFF

Setting the alarm print ON/OFF.

When ON1, prints the alarm occurring and the alarm recovering. When ON2, prints only the alarm occurring.

Example) When sets both the alarm occurring and the alarm recovering.

Display	Operation keys	S Description
•••		Enter to the engineering mode (See the key operation in page 69). Use the \triangle key to display
		"•••", and press the "ENT" key.
· · · · · ·		Use the \triangle key to select " \cdot \cdot \cdot \cdot ", and press the
		"ENT" key.
		Use the \triangle key to display " \cdot \cdot ", and press the
		"ENT" key.
		Setting is completed. Returned to the Alarm Print
		Setting screen.

(4) Logging print ON/OFF

Set logging print to ON/OFF.

In case of logging print ON, set the print start time and print interval.

.

ON/OFF	

. . .

Printing Start time

	•	•	
	• •	•	
	• •	•	

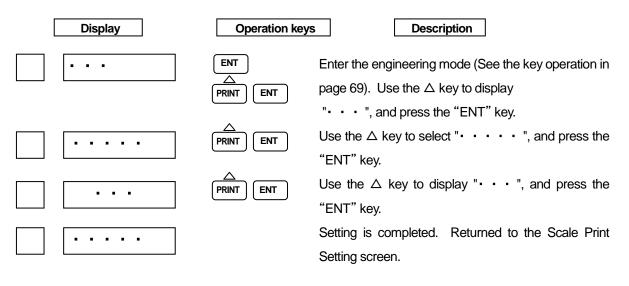

Example) When you want logging print to start at 18:00 every day.

(5) Scale print ON/OFF

Set scale print to ON/OFF.

Example) When setting scale prints to OFF.

(6) Record Start/End Print OFF/SYNC/ASYNC

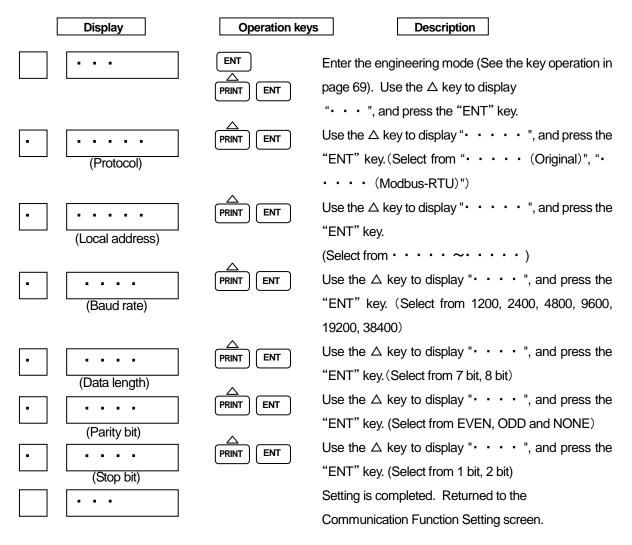

Set Start/End print to OFF/Synchronous print/Asynchronous print.

Example) When setting Start/End print to asynchronous print.

Display	Operation key	s Description
•••	ENT PRINT ENT	Enter the engineering mode (See the key operation in page 69). Use the \triangle key to display "••••", and press the "ENT" key.
••••		Use the \triangle key to select "•••••", and press the "ENT" key.
••••		Use the \triangle key to display "•••••", and press the "ENT" key.
••••		Setting is completed. Returned to the Record Start/ End print Setting screen.

7.2.7 Setting the Communication Function

Set Local Address, Baud Rate (communication speed), Data Length, Parity Bit, and Stop Bit. Example) Local Address: 02, Baud Rate: 1200bps, Data Length: 7 bit, Parity Bit: even, Stop Bit: 2 bit.

7.2.8 Initializing the Setup Data and Calibration Data

When you select the "••• ", the setup mode settings is all initialized.

When you select the "••• ", is reset to the factory default calibration value.

In addition, setup mode settings are not initialized. Operation Please consult with care.

Example) When you initialize the Setup Data.

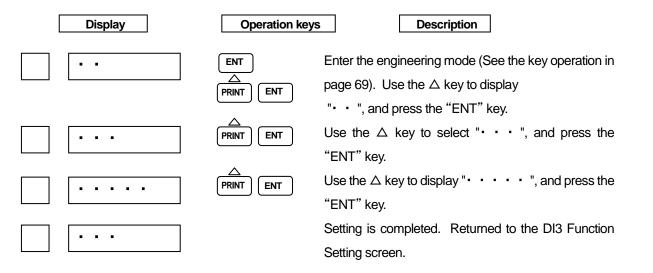

Display	Operation keys	Description
••••	ENT	Enter the engineering mode (See the key operation
		in page 69). Use the \triangle key to display "• • • • ",
		and press the "ENT" key.
•••		Use the \bigtriangleup key to select " ", and press the
		"ENT" key.
•••.		Initialization is completed.

7.2.9 DI Functions

No function	prove and the second
Manual print (Sync.)	: • • • • (Positive edge: running start)
Manual Print (Async.)	: • • • • (Positive edge: running start)
RUN/STOP trigger function	: • • • (ON:RUN, OFF:STOP)
Date/Time Print (Sync.)	: • • • • (Positive edge: running start)
Date/Time Print (Async.)	: • • • • (Positive edge: running start)
Chart speed selection	: • • • • (ON:Spd-1, OFF:Spd-2)
Comment print 1-3 (Sync.)	(Positive edge: running start)
Comment print 1-3 (Async.)	: · · · · · · · · · · · · · · · · · · ·

Allocate the functions to three DIs. There are the following 12 DI functions.

Example) When setting comment prints 3 for DI3.

[Note]

The setting is OFF without the DI option. Do not set any setting except for OFF.

7.2.10 Temperature Unit

It changes the setting of a temperature unit.

Example) When setting a temperature unit to being Fahrenheit.

Display	Operation keys	Description
••••		Enter the engineering mode (See the key operation in age 69). Use the \triangle key to indicate •••••", and press the "ENT" key.
·		Jse the \triangle key to select "• ", and press the "ENT" ey.
••••		Setting is completed. Returned to the Temperature Init Setting screen.
[Note]		

When changes temperature unit, all set up data (configuration) becomes initial.

7.2.11 Point Calibration

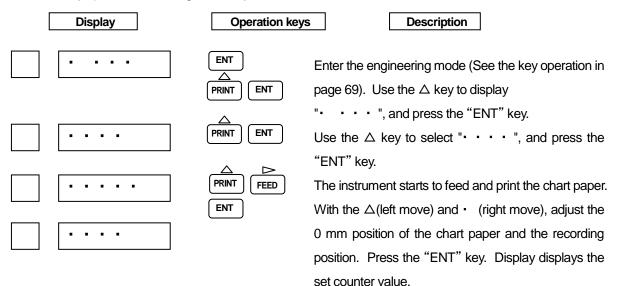

Calibrate a dot printing position.

- • • : Calibration of the zero point position
- · · · · Calibration of the span point position

[Note]

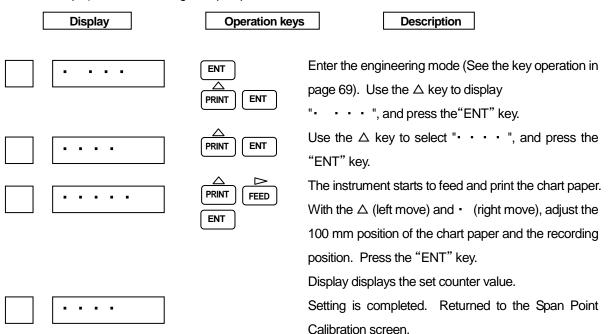

Point calibration " $\cdot \cdot \cdot$ " and " $\cdot \cdot \cdot \cdot$ " are setup item before shipment. Do not change the setup value.

Example) When calibrating the zero point.

Setting is completed. Returned to the Zero Point Calibration screen.

Example) When calibrating the span point.

7.2.12 Data Calibration

Calibrate the voltage, resistance temperature detector, and reference junction compensation.

- • • : Calibration of the voltage
- •••• : Calibration of the resistance temperature detector
- · · · : Calibration of reference junction compensation

[Note]

This recorder is precisely proofread. First of all, please reconfirm a setting value when the instruction value is abnormal.

The calibration value abnormality doesn't usually occur.

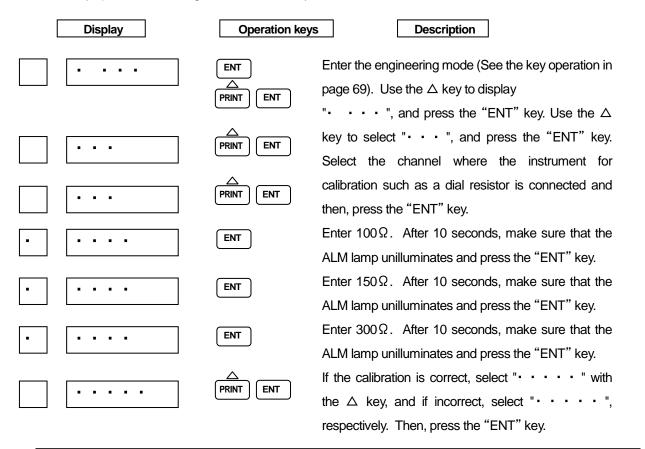

Example) When calibrating the voltage at Channel 1.

	Display	Operation key	Description
	••••		Enter the engineering mode (See the key operation in page 69). Use the \triangle key to display "•••••", and press the "ENT" key. Use the \triangle
	••••		key to select "••••", and press the "ENT" key. Select the channel where an instrument for calibration
	•••		such as a mV generator is connected, and then, press the "ENT" key.
•	••••	ENT	Enter 0 mV. After 30 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 15 mV. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 25 mV. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 35 mV. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 55 mV. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 200 mV. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 1 V. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 5 V. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
•	••••	ENT	Enter 10 V. After 10 seconds, make sure that the ALM lamp unilluminates and press the "ENT" key.
	••••		If the calibration is correct, select "•••••" with the \triangle key, and if incorrect, select "•••••",
			respectively. Then, press the "ENT" key.

[Note]

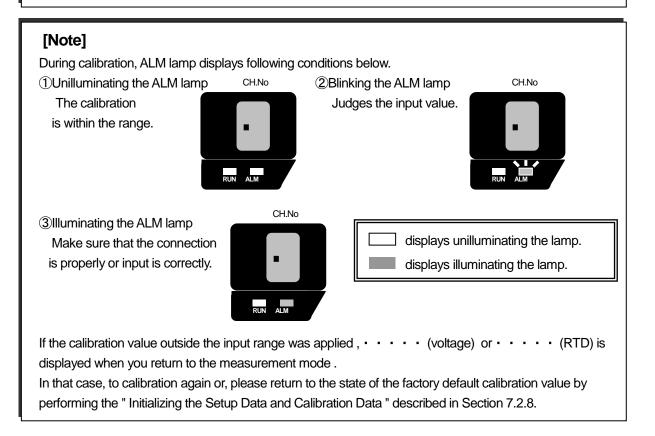

For calibration for voltage input, only one channel calibration is effective to all the channel.

Example) When calibrating the resistance temperature detector at Channel 2.

[Note]

When calibrate RTD for a channel, the input terminals of the other channels are shortcut. Recording requires RTD calibration for every channel.

Example) When setting the terminal temperature for Channel 1.

Display	Operation key	s Description
	ENT A PRINT ENT	Enter the engineering mode (See the key operation in page 69). Use the \triangle key to display "•••••", and press the "ENT" key.
		Use the \triangle key to select "•••", and press the "ENT" key.
• • • • •		Select the Channel to set, and press the "ENT" key. Measure and display the real time terminal
	ENT	temperature. When press the "ENT" key, turn to the setting temperature display.
	PRINT FEED ENT	Use the \triangle key to alter a numeral, and \cdot key to shift a digit. Then, press the "ENT" key. See 9.5 (3) Calibration of Reference Junction Compensation.
	PRINT ENT	If the calibration is correct, select "•••••" with the \triangle key, and if incorrect, select "•••••", respectively. Then, press the "ENT" key.

[Note]

When calibrate the terminal temperature, select a channel to calibrate for channel 1 to channel 3, and select another channel for channel 4 to channel 6. Calibrate these channels separately.

7.3 Terminating the Engineering Mode

Example) The following describes how to save the setting data.

Display	Operation keys	s Description
•••	PRINT ENT	Use the \triangle key to display "•••", and press the "ENT" key.
••••	ENT	Use the \triangle key to select "•••••", and press the "ENT" key. The settings of the engineering mode
		have been saved. Recording starts under the new settings.

[Note]

Upon termination, if you select "••• " and turn off the power without selecting "•••• ", the settings will become invalid. Selecting "•••• " invalidates the settings and starts recording under the previous settings.

8. COMMUNICATIONS

8.1 General Description

8.1.1 General Description of Functions

This Recorder has the following communication functions:

1 Outputting the process variable

Process variable, alarms status, etc.

2 Outputting the set value

Reading the setup data such as a range, chart speed, etc.

3 Inputting the set value

Writing the setup data such as a range, chart speed, etc.

(4) Controlling of the recorder (Partially)

Selection to print, recording start/stop and changing display etc.

For the functions ② to ④, see the separate Communication Command Reference Manual (charged). Setting the engineering mode is not capable with communication.

8.1.2 Transmission Specifications

(2) Connection	:One-to-one(RS-232C), One-to-N(RS-485); N = 1 to 32
(3) Communication speed	:1200, 2400, 4800, 9600, 19200, or 38400 bps
(4) Start bit	:1 bit
(5) Stop bit	:1 or 2 bits
(6) Parity	:Even, Odd, or None
(7) Data length	:7 or 8 bits

8.2 Original Protocol

8.2.1 Data Construction

(1) Character construction

In order to send one data (byte) in start-stop synchronous communications, the following character construction is assumed:

Start Bit (1) + Data Bit (7 or 8) + Parity Bit (1) + Stop Bit (1 or 2)

(2) Data format

The communication data is sent with data terminators added to multiple characters. Upon receiving these terminators, the recorder starts analyzing the communication data.

(3) Error Detection

If the recorder receives the data that has resulted in a signal error such as a parity error, framing error, etc. due to the noise or hardware troubles, it will ignore that data. Consequently, a data format error results, determining that the data is not sent in the normal data format. The receiving function does not execute that command and the transmitting function does not reply. The data format error status can be confirmed by the ESC S command (described later).

- (4) Control codes
 - ESC: 1B HEX (hexadecimal)

This code is used for an escape sequence such as opening/closing the link.

It cannot be treated as part of the text data.

CR: 0D HEX (hexadecimal)

This data is added to the end of the text data together with the LF data.

This code cannot be treated as part of the text data.

LF: 0A HEX (hexadecimal)

This data is added to the end of the text data together with the CR data. This code cannot be treated as part of the text data.

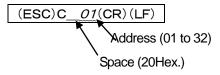

8.2.2 Opening/Closing the Link

To communicate with the recorder, you must establish a connection between the host computer and the recorder. In case of one-to-N communications, it is necessary to inform each recorder which recorder the text is being sent. If a link open command is sent to multiple recorders through their send function, all the recorders, which have received the command, will send and cannot receive the normal data.

1) Open Command

For the host computer to communicate the recorder, it must issue this command and memorize that it has been issued.

2) Close Command

For the host computer to communicate with the recorder, this command must be issued to the open-link recorder, if you want to send the data to the recorders, which have not issued the open command.

8.2.3 Outputting the Process Variable Data

1) Specifying the Process Variable Data Output

TSO(CR)(LF)

Once this command is received, the recorder transfers the process variable data to the transmit buffer, when the (ESC) T command is received.

2) Updating the Data

(ESC)T(CR)(LF)

Once this command is received, the recorder transfers the update process variable data to the transmit buffer.

3) Specifying the Process Variable Data Output Order (At BINARY Mode Output)

BOO(CR)(LF) Outputs starting from the upper byte.

BO 1(CR) (LF) Outputs starting from the lower byte.

The recorder outputs starting from the lower byte, unless otherwise specified.

4) Outputting the Data

FMO, S_CH, E_CH Specifies the ASCII mode output.

FM 1, S_CH, E_CH Specifies the BINARY mode output.

S_CH :Output start channel 01 to 06

E_CH :Output end channel 01 to 06

% When the number of channels is one, specify (S_CH) = (E_CH).

Example) FM0,01,06(CR)(LF)..... ASCII,01 to 06 channel output.

5) Process Variable Data Transmission Format (ASCII)

 $\begin{array}{c|c} DATE(\underline{YY})(\underline{MM})(\underline{DD})(CR)(LF) & Date \\ \\ \hline \\ Year Month Day \\ \hline \\ \hline TIME(\underline{HH})(\underline{MM})(\underline{SS})(CR)(LF) & Time \\ \end{array}$

Hour Minute Second

(DS 1) (DS2) (ALM1) (ALM2) (ALM3) (ALM4) (UNIT 1~6) (CHNo.), (DATA) (CR) (LF)

① DS 1 .Data information 1 (1 byte)

- N : Normal
- D : Difference computation data
- S : Sum computation data
- M : Average computation data
- R : Square root computation data
- C : Decade computation data
- O : Over range (Data = \pm 99999)
- S : Skip (All the data are spaces)

② DS2 :Data information 2 (1 byte)

E	: Final data
_(Space)	:Other data

③ ALM 1 to 4	: Alarm information (1 byte each, 4 bytes in total)
Н	: Upper-limit alarm
L	: Lower-limit alarm
_(Space)	: Alarm OFF or alarm setting OFF.

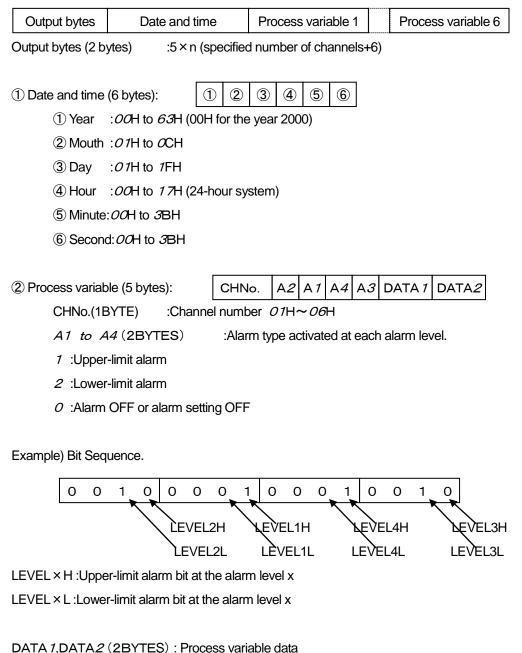

④ UNIT 1 to 6 :UNIT(6 bytes)

Returns the set unit in terms of code. (When sending the 7-bit data, the higher 1 bit is missing.)

(5) CHNo. : Channel number (2 bytes) 01~06

(6) DATA :Process variable data
 Sign(1 byte) :"+" or "-"
 Data mantissa section (6 bytes) :00000~99999
 Data exponent section (4 bytes) :E (Sign: 1 byte) (Multiplier: 2 bytes)
 <Example> + 99999E-02

6) Process Variable Data Transmission Format (BINARY)

-32000 to +32000 (2-byte hexadecimal data) The higher and lower bytes can be reversed by the BO command. If Skip is specified, *8080*H will be output.

[Note]

- Outputs a data over -32000 to +32000 as the overflow. An overflow 7E7E is output on plus side, and 8181 is output on minus side. Excluding the Decade channel.
- It outputs data output by the Decade channel as follows regardless of the BO command. The upper byte outputs a mantissa (10 to 99). The lower byte outputs an exponent (-19 to 19). A decimal point position is fixed on 1 digit.

8.2.4 Outputting the Unit and Decimal Point Position Data

1) Specifying the Unit and Decimal Point Position Data Output

TS2(CR)(LF)

Once this command is received, the recorder transfers the unit and decimal point position data to the transmit buffer, when the (ESC) T command is received.

2) Updating the Data

(ESC)T(CR)(LF)

Once this command is received, the recorder transfers the update unit and decimal point position data to the transmit buffer.

3) Outputting the Data

LF, S_CH, E_CH

S_CH :Output start channel 01 to 06

E_CH :Output end channel 01 to 06

% When the number of channels is one, specify (S_CH) = (E_CH).

Example) LF,01,06(CR)(LF)..... The unit and decimal point of 01 to 06 channel output.

4) Data Format

(DS 1) (DS 2) (CHNo.) (UNIT 1~6) (DP)		
1) DS 1	:Data information 1 (1 byte)	
Ν	: Normal	
D	: Difference computation data	
S	: Sum computation data	
М	: Average computation data	
R	: Square root computation data	
С	: Decade computation data,	
0	: Over range (Data = \pm 99999)	
S	: Skip (All the data are spaces)	
2 DS2	:Data information 2 (1 byte)	
E	:Final data,	
_(Space):Other data		

③ CHNo. :Channel number (2bytes);01~06

④ UNIT 1 to 6:UNIT

Returns the set unit in terms of code. (When sending the 7-bit data, the higher 1 bit is missing.)

(5) DP :Decimal point information (1 byte); $\mathcal{O} \sim 4$

[Note]

By the range setting, a decimal point position may differ from a display screen.

8.2.5 Outputting the Status

If the open-link recorder has a data error on its link, it will save the error as a communication error in the internal status area. The (ESC S) command reads this status. Issuing this command clears the on-going error.

1) Status Output Command

ESC S(CR)(LF)

Receiving this command outputs the status for the command received so far.

2) Status Output

XX :00~19

Table 8.1 Status output list

Status factor	Status factor		
Status output	A/D END	Syntax error	Paper empty
ER 00 C _R L _F			
ER 01 C _R L _F	0		
ER 02 C _R L _F		0	
ER 03 C _R L _F	0	0	
ER 04 C _R L _F			
ER 05 C _R L _F	0		
ER 16 C _R L _F			0
ER 17 C _R L _F	0		0
ER 18 C _R L _F		0	0
ER 19 C _R L _F	0	0	0

O: The factor from which status is ENABLE.

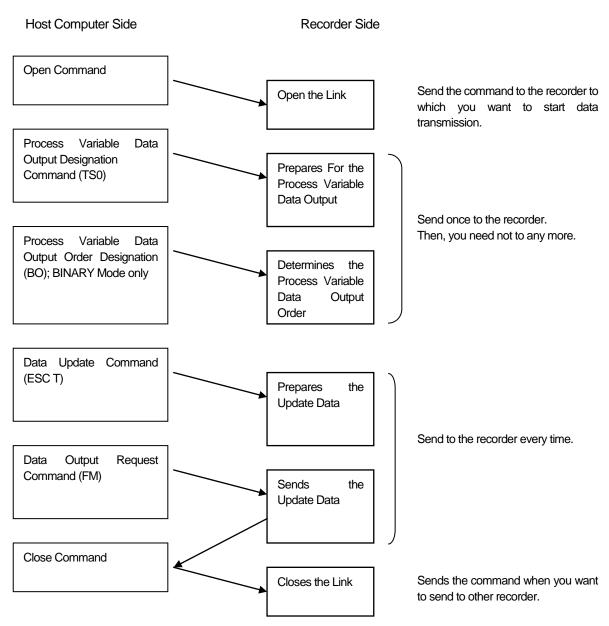

A/D END : When carring out AD conversion end, it occurs.

Syntax error : It occurs during a communication error or a command error occurs.

Paper-empty : When Paper-empty is found, it occurs.

(The Paper-empty option has been attached)

8.2.6 Data Reception Example

8.3 Modbus RTU Protocol

The Modbus protocol is a communication protocol developed for PLCs by Modicon Inc. (AEG Schneider Automation International S.A.S). It is described in the protocol specification (PI-MBUS-300 Rev. J). Refer to this document for information on the Modbus protocol specification.

8.3.1 Data Construction

Slave address	Function code	Data	CRC
(1 byte)	(1 byte)	(variable)	(2 bytes)

8.3.2 Function Codes

The following function codes are available on this product:

Code	Function	Maximum data length	Modbus-specific function (reference)
03H	Setting data read	123 words	Data read from holding register
04H	Input data read	123 words	Data read from input register
06H	One-time data write	1 word	Data write to holding register
10H	Continuous data writes	123 words	Data write to holding register

8.3.3 Error Response

In accordance with the communication protocol for the pertinent function code, if an error occurs during command transmission, an error response is returned in the fixed format described in this section.

Component	Data length	Data
Slave address (only for Modbus RTU)	1	-
Function code + 80H	1	86H
Error code	1	10H
Error check (only for Modbus RTU)	2	CRC
Total number of bytes	5	-

Error codes and their occurrence conditions

Error code	Description	Occurrence condition(s)
01H	Invalid function code	An unsupported function code is specified.
02H	Invalid register address	The relative address range exceeds "9999."
03H	Invalid number of registers	 The length of the accessed data is "0" or the sum of the relative address and data length exceeds the limit. It is assumed that two or more function codes, each executable for one area, are involved. Data longer than 2 words is specified for a one-time write command. The data length exceeds 123 words.
04H	Device error	The received data is shorter than the predefined data length.
10H	Command error	An attempt at a write over an area exceeding the writable range.

8.3.4 Reading from the Input Register Area

The input register area is a read-only area. The current measured value and the current time are mapped. Specify the start address (relative) and data count (assuming that one word is two bytes) of the data to be read.

Function code: 04H

Example of master transmission (with a start address of 0032H and a data count of 2 words)

	Component	Data length	Data
Slave ad	dress	1	—
Function	code	1	04H
	Relative start address (high-order)	1	00H
Data	Relative start address (low-order)	1	32H
Dala	Read data count (high-order)	1	00H
	Read data count (low-order)	1	02H
Error che	eck	2	CRC (16 bits)
Total nur	nber of bytes	8	

Example of slave response (with a start address of 0032H and a data count of 2)

-	• •		,
	Component	Data length	Data
Slave ad	Slave address 1		—
Function	code	1	04H
	Number of data bytes	1	04H
	Data 1 (high-order)	1	00H
Data	Data 1 (low-order)	1	09H
	Data 2 (high-order)	1	00H
	Data 2 (low-order)	1	0AH
Error check		2	CRC (16 bits)
Total nur	nber of bytes	9	

[Input Register Area Map] Function code: 04H

Address	Relative address (HEX)	Name	Arrange ment	Description	Remarks

8.3.5 Reading from or Writing to the Holding Register Area

The holding register area is a read-write area. Parameter settings and the start and stop command of the recording state are mapped. For read, specify the start address (relative) and data count (assuming that one word is two bytes) of the data to be read. For write, specify the start address and the data to be written.

For Detail, see the separate "CR06 HYBRID RECORDER COMMUNICATION COMMAND INSTRUCTION MANUAL (HXPCR06mnC0005E)".

9. MAINTENANCE

Inspect the following maintenance items in order to use this instrument effectively.

- Inspection
- Cleaning
- Replace Consumables
- Adjust Dot Printing Position
- Calibration

9.1 Inspection

Inspect the condition of operation to use effectively.

When a defect is found, see Chapter 10 "Trouble Shooting".

- Trend recording deflected?
- Are recording indication done properly?
- · Any big error in indicated values or dot printing position?
- · Any improper dot printing?
- Any blurred dot printing or printout?
- · Proper printout?
- ◆Is the chart paper feed properly?
- · Is the chart paper folded properly?
- · Aren't the feed holes in the chart paper torn off or broken?
- · Is the chart speed correct?
- ♦ Is there any abnormal sound?

9.2 Cleaning

Many parts of this instrument are plastic. Use a dry cloth to wipe the parts should be clean.

[Note]

Do not use any organic solvent.

9.3 Replacing Consumables

In order to use this instrument effectively, replace the consumable parts as shown the following table.

No.	Name	Туре	Period	Remarks	Quantity
1	Chart paper	HZCGA0105EL001	33 days	Chart speed is 20mm/h	1
2	Ribbon cassette	WPSR188A000001A	3months	Chart speed is 20mm/h	1

[Note]

- ① When recording with a ribbon, a dot printing color phases out. To ensure clear recording, replace the ribbon cassette as possible.
- ② Use the ribbon cassette within one year after its purchase. Due to evaporation of ink, a printing color phases out as time goes on.

9.4 Adjust Dot Printing Position (Point Calibration)

The following describes how to adjust a printing position on the chart paper.

You are well advised to adjust it annually in order to maintain recording accuracy.

How to Adjust

It is unnecessary to enter the reference. With the apparatus left in the working conditions, make adjustment according to the instructions in 7.2.11 Point Calibration. (See page 81)

9.5 Calibration (Data Calibration)

Calibrate a process variable input every year in order to keep measurement accuracy.

[Note]

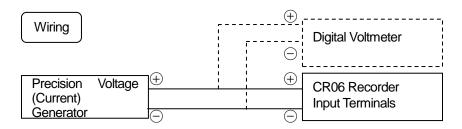

Prior to calibration, warm up for 30 minutes or more after power-on.

Devices required for calibration

- Precision voltage(current) generator (Jointly use a digital voltmeter with accuracy of ±0.02 % or less as required)
- Precision dial resistor

(1) Calibration of Voltage

Conduct calibration in case of voltage, current or thermocouple input. For thermocouple input, calibrate reference junction compensation together.

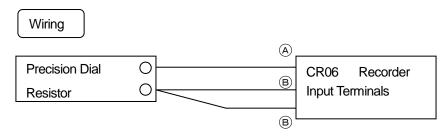

Conduct calibration according to the instructions in 7.2.12 Data Calibration (Calibration of the voltage).(See page 82)

[Note]

- ① Calibrate at any one channel.
- (2) When a shunt resistor is attached to the input terminal block in case of current input, detach it prior to calibration.

(2) Calibration of Resistance temperature detector

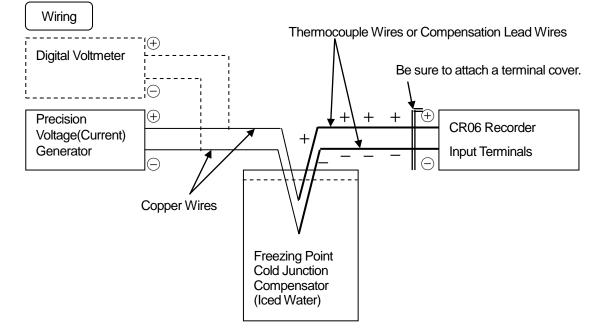

Conduct calibration according to the instructions in 7.2.12 Data Calibration (Calibration of the resistance temperature detector).(See page 83)

[Note]

A resistance value should not disperse greater than 6 m Ω from one wire to another. When calibrate RTD for a channel, the input terminals of the other channels are shortcut. Recording requires RTD calibration for every channel

(3) Calibration of Reference Junction Compensation

Conduct this calibration in case of thermocouple input.

- Example) Connect the input to Channel 1 and setting the calibration when the thermocouple input value (CR06 measurement) is -0.5 (input 0°C), the measured RJC temperature is 24.5°C.
 - 5) Check the Process variable when impressing $0.000 \text{mV} \pm 2 \mu \text{ V}$ to Channel 1 by the voltage generator beforehand. (In this example, it is -0.5° C.)
 - Check the terminal temperature of Channel 1 at the data calibration in the engineering mode (Reference junction compensation). (In this example, it is 24.5°C.)
 - Setup the value which added a part for the difference with true value (0.5°C) as the right RJC temperature.

 $[24.5 - (-0.5) = 25.0^{\circ}C]$

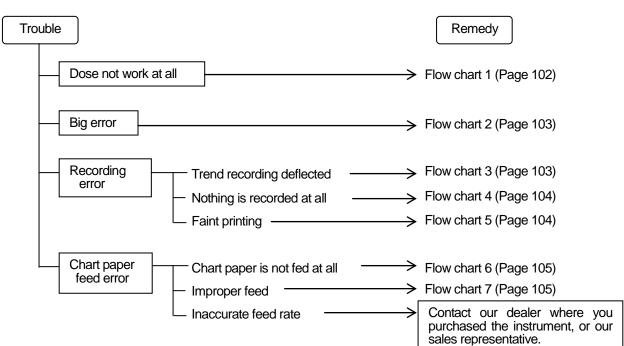

Conduct calibration according to the instructions in 7.2.12 Data Calibration (Calibration of reference junction compensation).(See page 84)

[Note]

- ① This calibration is conducted when compensation by the recorder's built-in temperature sensing element (INT: internal compensation) is selected as the reference junction compensation method.
- ② Wire to Channels 1 and 4 to conduct calibration.
- ③ After wiring, attach the terminal covers and wait for 5 minutes or more. Then, conduct calibration.

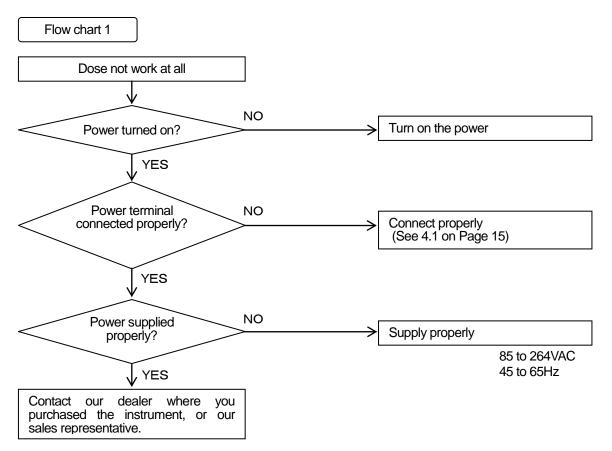

10. TROUBLESHOOTING

10.1 Troubleshooting

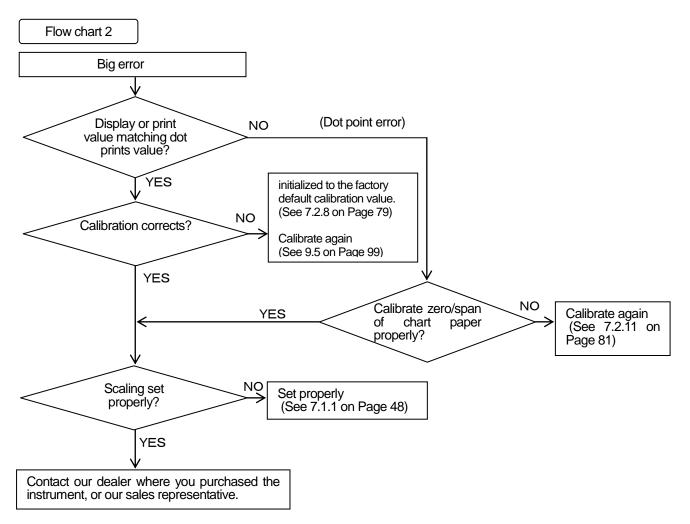

10.1.1 Trouble Items

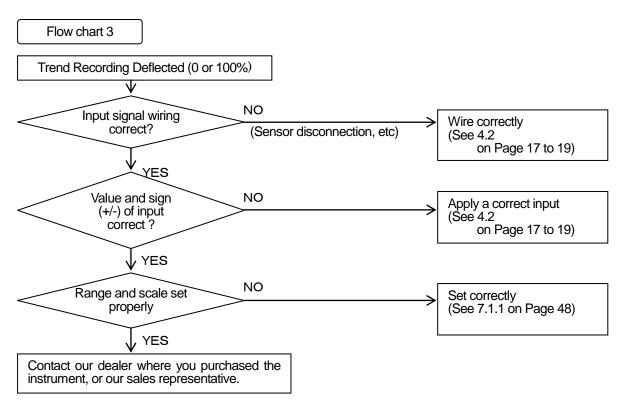

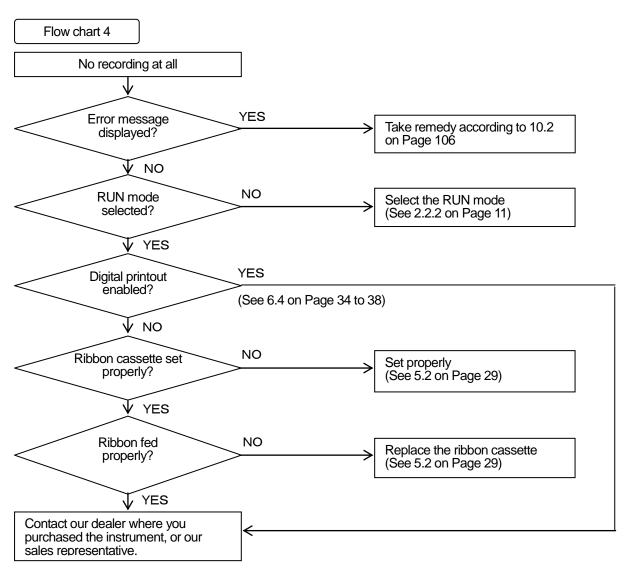

10.1.3 When there is a Big Error

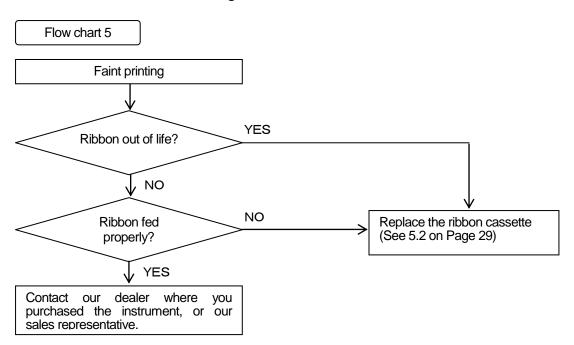

10.1.4 When the Trend Recording Deflected

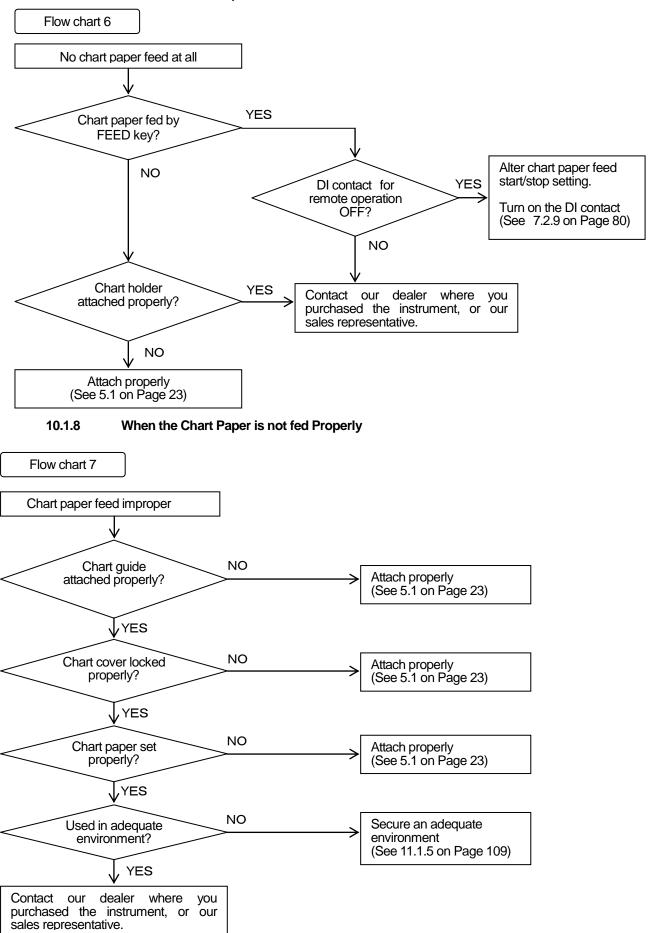

10.1.5 When Records Nothing

10.2 Self Diagnostics Function (ERROR)

This instrument always makes a self diagnostics on the items listed in Table 10.1 below. When an error is found in the self diagnostics results, a relevant error number is displayed.

10.2.1 Self Diagnostic Items

Table 10.1 Status output list

Туре	Error message	Parts	Diagnostic	Remedy
		Zero point sensor	Zero point position of servomotor cannot be detected.	
		ADC	AD conversion end error, Initializing error	
			The clock battery runs down[Note1]	
error			Contact our dealer where you	
Hard ware error		EEP WRITEWRITE	Non-volatile memory Writing error	purchased the instrument or our
Haro		EEP READ1	Non-volatile memory Reading error (Setup data)	sales representative.
		EEP READ2	Non-volatile memory Reading error (Engineering data)	
		EEP READ3	Non-volatile memory Reading error (ADC Calibration data)	
		RJC ERROR	The measurement is abnormal of the RJC internal temperature sensor.	
		Calibration error	Input range error at the calibration of voltage.	Review the input connections,
		Calibration error	Input range error at the calibration of RTD.	please do the correct calibration.
		Area error	Input value is over the setting range.	
		Time error	Clock time setting error	
eration error		Setting range error	Setting the channel (CH1) which cannot set up the sum/difference/average operation.	
oeratio		Area error	Span L \geqq Span R	
Q		Area error	Scale L \geq Scale R	Set properly
		Area error	Zone L \geq Zone R or Zone R – Zone L is less than 5mm.	
		Setting channel error	The reference channel range of the sum/difference/average operation is except Volt, TC, RTD and SCALE.	
		All channels skip error	Setting the Skip all channels.	

[Note1] The lifetime of the cell assumes about 10 years but sometimes depends on the use environment.

10.2.2 Error Display

- When multiple errors are encountered, their error numbers are displayed with automatic scrolling.
- When an error restores, an error display can be canceled to the input of the "RUN" key.

While indicates an error, does not indicate Auto, Manual and Date/Time.

11. SPECIFICATIONS

11.1 Common Specifications

11.1.1 Input Signal

DC voltage	: ± 10 , 0 to 20, 0 to	50, ±200 mV DC, ±1, 0 to 5, ±10 V DC	
Thermocouple	: B, R, S, K, E, J, T, C, Au-Fe, N, PR40-20, PL II , U, L		
(Thermocouples not to be connected to hazardous voltage or			
	equipment.)		
Resistance temperature detector		:Pt100, JPt100	

DC current :4 to 20mA DC (External shunt resistor: 250Ω <charged:HMSU3081A11>)

11.1.2 Performance and Characteristics

Digital accuracy rating	:See 11.2.1			
Input impedance $:10M\Omega$ r	nin. in mV, TC input (without burnout)			
	200k Ω min. in mV, TC input (with burnout)			
	1MΩ min. in voltage input			
	250 Ω (shunt resistance : external <charged:hmsu3081a11>)</charged:hmsu3081a11>			
	in mA input			
Allowable signal source res	istance			
	: 10k Ω max. in mV, TC input (without burnout)			
	100 Ω max. in mV, TC input (with burnout)			
	1k Ω max. in Voltage input			
	10 Ω max.(per line) in Resistance temperature detector input			
Normal mode rejection ratio	: 60dB min.(50/60±0.1Hz)			
Common mode rejection ra	tio :140dB min.(50/60±0.1Hz)			
Isolation resistance : 0.5kV	DC 20M Ω min. between the each terminal and grounding terminal			
Withstand Voltage : 1.5kV	AC for 1 minute between the power terminal and grounding terminal			
	:0.5kV AC for 1 minute between the input terminal and grounding terminal			
	:0.2kV AC for 1 minute between the input terminals			
	Interchannel maximum noise voltage: 200 V AC at 50/60 Hz			
Vibration resistance	:10 to 60Hz 1m/s ² max.			
Shock resistance :2m/s ² max.				
Clock precision	: \pm 50ppm max.(At Reference operating conditions)			
	The error due to power ON/OFF is not included.			
Chart feed accuracy	: ±0.1% max.			

11.1.3 Structure

Mounting	: Panel mount(vertical panel)		
	Allowable backward inclination : Within 30°		
Material(Color) :	Case ; Polycarbonate(Black), Glass 10% UL94-V0		
	Door	; Polycarbonate UL94-V2(Clear)	
		;Dust-proof, drip-proof (Complies with the IEC60529-IP65) not evaluated as	
		part of Underwriters Laboratories Listing certification.	

11.1.4 Power Source

Rated supply voltage range :100 to 240V AC			
Working supply voltage range	:85 to 264V AC		
Rated power frequency	:50/60Hz		
Working frequency range	:45 to 65Hz		

Table 11.1 Power consumption

	100VAC	Max. power consumption	
6-dot recorder	About 25VA	About 30VA	

11.1.5 Normal Operating Conditions

Ambient temperature	:0 to 50°C				
Ambient humidity :20 to 80%RH					
Supply voltage	:85 to 264V AC				
Supply frequency : 45 to 65	Hz				
Vibration	:10 to 60Hz 0.2m/s ² max.				
Shock	: Unacceptable				
Magnetic field	:400A/m max. (DC and AC: 50/60Hz)				
Noise	:Normal mode(50/60Hz)				
DC current, Thermocouple; Peak value lower than the span width					
	of the measuremen	nt range			
	Resistance temperature detector	; 50mV max.			
	Common mode (50/60Hz) ; 250V AC max.				
	Interchannel maximum noise voltage: 200 V AC at 50/60 Hz				
Posture	: Allowable backward inclination : within 30° , Right-and-left level				
Warming up time :30 minutes min. from the time of a power-on injection					

11.1.6 Alarm (Relay Output is Optional)

Outputs	:6 point (Built-in option, normally open)		
Alarm types	:2 types(H, L), total 4 levels/channel		
Contact point capacity	:250V AC, 3A max. (Resistive load)		
	30V DC, 3A max. (Resistive load)		
	125V DC, 0.5A max. (Resistive load)		
Hysteresis width	:0.5%		
Setting accuracy : Digital display accuracy			

11.1.7 Low Voltage Directive and EMC Directive

Low Voltage Directive	: EN61010-1
EMC Directive	: EN61326-1 Class A
	At the EN61000-4-3 test condition:
	DC voltage DC contact range : Accuracy Ratings + 3digit
	Thermocouple range : Accuracy Ratings + 5digit
	Resistance temperature detector range : Accuracy Ratings + 10digit

11.1.8 DI Function (Option)

Set up point is a maximum of 3.

11.1.9 Paper-empty Detecting Function (Option)

Detects the Paper-empty to output an alarm.

11.2 Standard Setting Specifications

11.2.1 Measurement Range

The arbitrary setup is possible by the operation key.

A digital accuracy rating is as Table11.2 at Reference operating conditions. It is shown below.

Reference operating conditions	: Temperature		; 23 ±2°C
	Humidity	; 55 ±109	%RH
	Power source vol	tage	; 85 to 264V AC
	Electric wave freq	uency	; 50/60%Hz ±1%
	Warming up time		; 30 minutes min.

The performance in the state where nothing is vibration and a shock.

Terminal block reference junction compensation accuracy is not included in the digital accuracy rating. It is shown below.

Terminal block reference junction compensation accuracy

♦B, R, S, Au-Fe, PR40-20	:±1°C
♦K, E, J, T, C, N, PL II , U, L	:±0.5°C

11.2.2 The Accuracy at the Computation

(1) Scaling

The accuracy rating at the scaling is as following formula. Scaling accuracy (digits) = Range accuracy rating (digits) \times Scaling factor +2 digits

But, Scaling factor = <u>Scaling span (digits)</u> Measurement range span (digits)

Example 1) When VOLT range is $-1.000 \sim 1.000V$ and Scaling range is $0.00 \sim 100.00$. Range accuracy rating = $0.1\% \times 1.000V + 3$ digits

(Input +1.000V) = 4 digits

Scaling factor = $\frac{10000-0}{1000-(-1000)}$

Therefore, Scaling accuracy $= \pm (4 \times 5 + 2)$

$$= \pm 22$$
 digits

Analog recording accuracy
$$= \pm \left[4 + \{1000 - (-1000)\} \times \frac{0.3}{100} \right]$$
$$= \pm 10 \text{ digits}$$
$$= \pm 0.01 \text{V}$$

Example 2) When Type K is 0.0~200.0°C and Scaling is 0.00~200.00.

Range accuracy rating $=0.15\% \times 200.0 + 0.3^{\circ}C$

(Input 200°C) =0.6°C =6 digits Scaling factor = $\frac{20000-0}{2000-0}$ Therefore, Scaling accuracy =±(6×10+2) =±62 digits =±0.62°C

(2) Square root computation

The square root computation is as following formula.

Display value = $10 \sqrt{\text{Process variable}}$

Display value accuracy rating: \mathcal{E} , Process variable accuracy: e, and Process variable: x (convert into %).

Display value = 10 $\sqrt{x \pm e} \approx 10 \sqrt{x} \pm \frac{10e}{2\sqrt{x}}$ Therefore, Display value accuracy $\mathcal{E} = \frac{5e}{\sqrt{x}}$ When input 4~20mA, the square root computation accuracy: \mathcal{E} is as following formula.

Measuring 100%	$\mathcal{E}_{100} = \frac{5e}{\sqrt{100}}$	$= \frac{5(0.2+0.125)10}{-0.16\%}$ rdg
Measuring 50%	$\mathcal{E}_{50} = \frac{5e}{\sqrt{50}}$	$= \frac{5(0.1+0.167)}{7.07} = 0.19\% \text{ rdg}$
Measuring 9%	$\mathcal{E}_{9} = \frac{5e}{\sqrt{9}}$	$= \frac{5(0.018+1.39)}{3} = 2.3\% \text{ rdg}$
Measuring 1%	$\mathcal{E}_{1} = \frac{5e}{\sqrt{1}}$	= 5(0.002+12.5) = 62.5% rdg

If the process variable is low as above, its accuracy rating is incorrect.

(3) Decade

The accuracy rating at the decade computation is defined the logarithm of display value. Normally, the accuracy rating is less than 1 digit and you cannot read by significant digit.

(4) Difference, Sum, and Average

The accuracy rating of Difference, Sum, and Average is as following formula.

Difference and Sum	: Reference channel accuracy rating ×2	
Average	: Reference channel accuracy rating	

Example) When Reference channel VOLT is $00.00 \sim 10.00V$ and Difference is $-10.00 \sim 10.00$.

Reference channel accu	racy rating	$= \pm (0.3\% \times 10.00 \text{V} + 3 \text{ digits})$
		$= \pm (1000 \times 0.003 + 3)$
		$=\pm 6$ digits

Difference accuracy rating $= \pm 6 \times 2 = \pm 12$ digits

11.2.3 Individual Specifications

Block	ltem	Specification	
Input Unit	Measuring Point	6	
	Input Sampling	10s/6CH	
	Display Interval	2.5s	
	Recording Form	Wire det (O geler iste ikk en)	
	Printing Form	– Wire dot (6-color ink ribbon)	
	Recording Width	100mm	
Record	Print Period	10s/6CH [Note 1]	
& Printer	Chart paper	Length : 16m, Width : 114mm, Folding width : 40mm The length of the Clean Chart is 12 m.	
	Chart speed	0, 1, 2, 3, 4, 5, 10, 15, 20, 25, 30, 40, 50, 60, 75, 80, 90, 100, 120, 150, 160, 180, 200, 240, 300, 360, 375, 450, 600, 720, 750, 900, 1200, 1500mm/h (Analog recording is not done during the chart speed setting 0mm/h.)	
	Recording color	No.1(Purple), No.2(Red), No.3(Green), No.4(Blue), No.5(Brown), No.6(Black) [Note 2]	
	Printing color	Purple, Red, Green, Blue, Brown, Black	
	Weight	1.5kg max.	
Power consumption		30VA max.	

Table 11.3 Specification Items

[Note 1] Select the Dot Point Interval from 10, 20, 30 and 60 seconds for the setting.

[Note 2] Change in arbitrary colors in possible by setup.

11.2.4 Standard Functions

Table 11.4 Standard Functions

ltem	Description
Analog indication	None
Analog recording	Makes analog recording with 6-color dot.
Engineering unit indication	None
Digital display	Indicates Channel No., Process variable data, Chart speed, Alarm setting value on the display.
Logging print	Prints Date, Time, Scaling, Chart speed, Process variable and Engineering unit at a programmed interval. With the setting, it is possible for the synchronous print/Asynchronous print to choose.
List print	Prints Chart speed, Sensor type, Measurement range, Engineering unit, Alarm setting value, Comment, Printing description, Logging print ON/OFF, Zone, Partial Compression/Expansion
Engineering list print	Prints Channel or Tag, Alarm function, Logging print ON/OFF, Reference time, Interval, Scaling print ON/OFF, Logging print Sync./Async., Alarm hysteresis, Burn out, DI function(Option)
Affix print	Prints Channel number by the analog recording.
Manual print	Prints Measurement result by key input. Analog recording stops.
Dot print skip	Skips recording of an unused channel.
Programming	Programs Chart speed, Alarm setting value, Logging, Dot point skip, Date and Time.
Memory back up	A built-in lithium battery protects the clock function. The battery life is 10 years. (total power off period of the instrument : 5 years) A non-volatile memory stores setting data and calibration data.
Alarm	Sets 2 types (H, L) of alarms per channel. Sets a total of 4 level.
Chart speed	Selects Chart speed from 34 types.
Clock indication	Indicates Year, Month, Day, Hour and Minute. Sets the year in A.D, and adjusts leap year automatically.
Self diagnostics	Occurring some type of the defect to indicate "E Err * *". (* *: type of the defect)
Scaling	Indicates and record the input of a unification signal etc. is changed into the engineering scales.

11.3 Standard Setting Functions

11.3.1 Standard Setting Functions

Table 11.5 Standard Setting Functions

Function	Description
Burnout	To deflect over toward 100% with disconnecting input. Specifies the every channel's burnout. (DC voltage of \pm 50mV max., TC input)
Tag Number	Sets a tag number by 7 figures every channel. (Prints at a logging print)
Reference Junction Compensation	Specifies an inside/outside of the Reference Junction Compensation.
Copy Function	Copies a channel setting up.
Setting input offset	Setting input offset is possible for every channel.
Zone Recording (Track Recording)	Specifies a recording area every channel to separate into Tracks.
Partial compression/expansion	Records Partial Compression/Expansion to 1-crease line every channel.
Decade Recording Indication	Records and indicates by 5 decades. It is 2 figures that the effective number to indicate and print.
Alarm Print	Prints Occurrence time, Occurrence channel, Setting No. and Alarm type in purple at occurring an alarm.
Alarm Recovery Print	Prints Recovery time, Recovery channel, Setting No. and Alarm type in purple at recovering an alarm.
Record Start/End Print	Prints time and comment ("Start" or "End") when record beginning or end.
Computation	Computes Square root.
Interchannel Computation	Computes Sum, Difference and Average computation.
Alarm Hysteresis Width	Sets an alarm hysteresis width 0% FS or 0.5% FS.

11.4 Optional Functions

11.4.1 Remote Function of DI

Function	Description
Chart Feed Start/Stop	Starts with turning to ON. Stops with turning to OFF.
Changing Chart Speed	Changes 1st with turning to ON and 2nd with OFF.
Comment Print (Sync./Async.)	Prints Comment with turning to ON.
Manual Print (Sync./Async.)	Prints Manual Print with turning to ON.
Date and Time Print (Sync./Async.)	Prints Date and Time with turning to ON.

11.4.2 Alarm Board

6 relays

11.4.3 Communication unit

RS-232C(Standard)

RS-485(option)

Custom Manufacturer Since 1972
